Selected video clips will be used to demonstrate how stuttering has been portrayed in the movies and how these depictions contrast with the stuttering experience illustrated in *The King’s Speech*. A description of the various forms of fluency problems humans can experience is provided along with the basic characteristics of the most common form—developmental stuttering. This is followed by a brief summary of recent literature concerning the psychological characteristics of people who stutter. Finally, basic goals and principles of therapeutic change will be presented.

**Cost:** $20 for Professionals; Free for Family Members and Students

**Continuing Education:**
See attached brochure for more information on this offering.
