For many, travel to China is the fulfillment of a lifelong dream: to explore the Forbidden City, home to Chinese Emperors over the centuries; to gaze in awe at an entire army of Terracotta Warriors; and to walk on the Great Wall that stretches over 3,000 miles.

China is a vast land that inspires and fascinates with its historic sights, diverse landscapes and rich culture. Yet beyond these great wonders, the most enduring memory is often the charm of the people.

So come and explore the **Glories of China** with us!

Minimally Invasive and Maximally Effective Dentistry:
The Oral Systemic Relationship, Understanding CAMBRA, and CAMBRA Treatment Planning and Options

Allen Wong, DDS, EdD

This continuing dental education course is divided into three 4-hour segments and will be presented over a period of three half-days in conjunction with the travel schedule for this program. Individuals must register for the continuing education portion of this program separately from the travel portion of the trip.

PROGRAM 1:  The Medical-Dental Connection

Over the past decade, scientific research has deepened our understanding of the oral systemic relationship. The 2000 Surgeon General’s report emphasized that people need to have oral health in order to have complete health. As a dental team, we have the opportunity to improve our patient’s overall health by educating them on these medical relationships. In addition, all dental practices have patients of varying health. The population of patients who are medically compromised and who have special needs is dramatically increasing. We will review the most recent information on treating medically compromised patients and offer suggestions to working with their physicians. We will also explore the new paradigm of dental and medical risk assessment.

You will learn:
1. The most recent information from the medical literature on oral systemic connections, including cardiovascular disease, pregnancy complications, diabetes and more
2. Cariology from a medical perspective
3. Medical risk and dental risk assessment considerations, particularly in medically compromised patients

Program 2:  Caries Management by Risk Assessment (CAMBRA) - Understanding and Incorporating CAMBRA Into Your Practice

Interest in Caries Management by Risk Assessment (CAMBRA) is growing worldwide, and the approach is now incorporated in most dental schools’ curriculum. Caries risk assessment is a new paradigm that focuses on minimally invasive strategies that emphasize oral biofilm, demineralization, and remineralization as key to controlling the caries disease process.

You will learn:
1. The concepts of CAMBRA, testing methods and treatment strategies
2. Evidenced-based literature on minimally invasive approaches.
3. How to demystify products and focus on effectiveness
4. How to develop your CAMBRA team

Program 3:  CAMBRA: Treatment Planning and Treatment Options

Once a person is diagnosed with high caries risk, then what? Why do some people get recurrent caries disease and others do not? What is the most appropriate treatment material? The strategies of treatment planning and options will be reviewed. We will emphasize treatment planning for longevity of restorations and using a minimally invasive approach.

You will learn:
1. Treatment planning with a strong emphasis on prevention and preservation of tooth structure
2. Rationale of Modified Atraumatic Restorative Technique
3. Reinforcing remineralization strategy in a practical way
4. Proper use of Glass ionomer restorative materials
5. Access to dental care, dental missions, and CAMBRA

Dr. Allen Wong is an Associate Professor in the Department of Dental Practice and is the director of hospital dentistry at Pacific. He is a diplomat of the American Board of Special Care Dentistry and has extensive experience in providing dental care to patients with disabling conditions and medical problems. He has staff appointments at several hospitals throughout the San Francisco Bay area including California Pacific Medical Center, Kaiser of San Francisco, Highland Hospital and University of California, San Francisco. A Fellow of the American College of Dentists, Dr. Wong is an ’86 Pacific graduate of the Arthur A. Dugoni School of Dentistry. He also received his doctorate in Professional Education and Leadership from Pacific in 2010.

Tuition: $435 per person (includes all three continuing education programs)

Credits: This program is designed for 12 units of continuing education credit.

University of the Pacific, Arthur A. Dugoni School of Dentistry is an ADA CERP recognized provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry.
