Evaluation of Gastroesophageal Reflux & Vomiting

GERD

FTT
- UGI
  - Normal
    - Successful Medical Management
    - Fails Medical Management

Aspiration Pneumonia
- UGI
  - Normal

Apnea
- UGI
  - Normal

Vomiting
- 0-6 Wks old
  - US pylorus (R/O Pyloric Stenosis)
    - Normal
    - Abnormal
      - Surgery
      - GERD

1. MBS*
2. MILK Scan*
3. PH Study*
- Abnormal
- Normal

Medical Management
- Successful

Surgical Management
- Fails Medical Management
  - Surgical Management
  - Successful

* MBS—Modified Barium Swallow ("Feeding Study")
* Milk Scan—Gastric emptying study (Can assess silent reflux, can assess aspiration, can assess gastric empty time)
* PH probe—Assess if there is significant acid reflux, non-acid reflux and associated symptoms with reflux
