2016-2017 Interns

2017-2018 Interns

APA and APPIC Contact Information

Program Interest and Rotation Preferences
INTRODUCTION

The University of Tennessee Professional Psychology Internship Consortium is one of the oldest APA accredited internship sites in the U.S., accredited since 1956. The Consortium consists of a number of cooperating agencies which offer a broad range of field experiences for qualified doctoral students in professional psychology. All agencies are described in the body of this brochure. The UT Department of Psychiatry plays a central role in administration, supervision, and seminars, as well as offering clinical experiences.

The program is individually designed but functions within the constraints required by funding commitments and agency affiliations. Clinical and didactic experiences are required. The program consists of three (3) rotation periods of approximately sixteen (16) weeks each. These rotations are usually split into major (up to 24 hours per week) and minor (up to 12 hours per week) placements. Some of the major rotation sites may also provide minor rotations as noted in the brochure. Times are set aside for seminars, supervision, staff meetings, and additional selected learning experiences (e.g., workshops). We offer three training programs: a General program, a St. Jude Pediatric program, and a St. Jude Neuropsychology program, which will be described further in this brochure. Applicants may apply to any or all programs.

The program accepts applicants from clinical, counseling, and school psychology programs because of the variety of professional experiences and rotations available, but gives preference to applicants from APA-approved schools. Potential interns are required to have completed 3 years of graduate training and at least 200 intervention hours and 200 assessment hours. The applicant must be certified as ready for internship by the Director of Training of their graduate program.

Value is placed on knowledge or training in evidence-based practices as well as interest and experience in the practice areas represented in the Consortium. The program is APA accredited and extends for one calendar year. Please see page 38 for recent admissions, support, and initial placement data.

The University of Tennessee is an EEO/AA/Title IX/Section 504/ADA employer
The University of Tennessee Professional Psychology Internship Consortium provides an integrated, individually-tailored, balanced and coordinated series of learning experiences. The program follows a scholar-practitioner model with a focus on direct clinical practice that is supported by the current psychological literature. The overarching general goals of the program are to (a) practice and expand on previously held knowledge, (b) develop new skills and knowledge, and (c) experience personal and professional growth that contributes to the development of a competent, professional psychologist. To achieve these overarching goals, interns are expected to achieve the following competencies by the end of the internship year:

I. General Professional Competencies which include:
   Knowledge and ability to apply ethical principles
   Knowledge of when to seek consultation and supervision
   Ability to interact professionally with peers, colleagues, and other professionals
   Ability to take responsibility for patients and establish rapport with patients
   Ability to cope positively with the stresses of clinical practice
   Maintain sensitivity to cultural and individual differences
   Ability to handle crisis situations with patients

II. Competency in Psychological Assessment

III. Competency in Psychotherapeutic Interventions

IV. Competency in Professional Consultation

V. Competency in Research Evaluation and Dissemination

VI. Competency in Supervision

The orientation program at the beginning of the internship year acquaints the intern with the Consortium components as well as most potential supervisors and seminar leaders. The training program is individually planned with each intern, with the recommendations of his/her Training Director taken into account. Each intern’s training plan is reviewed quarterly and modified appropriately.

The intern will have a variety of major and minor training experiences during the year with a number of different supervisors, thus being exposed to the broad range of theoretical orientations and viewpoints which exist in the training program. The intern will receive supervision in the refining of existing professional psychological competencies and in the mastering of new skills, methods, and procedures. Regular didactic and supervisory sessions are held for the above activities. Supervision includes live supervision,
videotaping, modeling-preceptor approaches, group supervision, and close informal relationships with staff.

A typical intern's schedule for the whole year might look something like this:

</table>

In the above example, the rotations at Center of Excellence, Boling Center for Developmental Disabilities and Juvenile Court are required because of fiscal support by the agencies. Every effort is made to match required rotations with intern preferences and needs. The other rotations were chosen by the intern in conjunction with the program administrators. Individual therapy clients (required of all interns) may be variously obtained, either through major or minor rotations or through add-on experiences.

Doctoral dissertation research may be pursued by arrangement.
ADMINISTRATION

Interns must meet individual requirements of funding agencies but there is consistency in the standards for, and administration of, admission requirements, evaluation procedures, rotation selection, and training goals to insure high quality and comparable experiences for all students. The program operates separately, but jointly and in an overlapping manner, with the APA-accredited program of the Memphis VA Medical Center Psychology Section Internship Program.

Although interns may receive their funds from various combinations of sources, the overall training program is coordinated by the Consortium Administrative/Training Committee, headed by Melissa Hoffmann, Ph.D., Director of the internship. The Committee is comprised of directors of training and agency chiefs (or their designees) from all Consortium agencies and intern representatives. The Committee meets regularly to discuss broad training issues, set policies, coordinate a smooth training experience for interns, evaluate intern progress, and evaluate the internship program.
1) Interns are given maximum opportunity to assume increasing professional responsibility, with appropriate supervision, as their skills and knowledge grow over the year.

2) Each intern's training schedule is worked out in as flexible, mutually-designed and agreed-upon manner as possible.

3) The internship year experiences are developed to meet the intern's professional needs and to provide maximum personal development.

4) Planned interaction among all interns in supervision, seminars, etc. is an integral part of this training program.

5) Trainees and their responsible program supervisors meet regularly to monitor and assess the intern's progress.

6) Supervision (averaging five hours per week) is mostly in individual patterns.

7) Individual therapy for interns is available.

8) Doctoral research time is permitted and up to 144 hours of official training time may be allotted to this activity.
SEMINARS AND CONFERENCES

1) All interns are required to participate in a comprehensive seminar series covering a variety of topics such as crisis intervention, neuropsychology, psychotropic drugs, cultural diversity, and professional and legal/ethical issues.

2) All interns are expected to participate in appropriate presentations or workshops by outside lecturers or consultations sponsored by the Department of Psychiatry and/or other cooperating agencies during the year.

3) All interns are expected, throughout the year, to participate in appropriate teaching, staff conferences, didactic seminars and workshops sponsored by local agencies, whenever possible.
SETTING

Memphis, on the Mississippi River, is a community consisting of a population of approximately 700,000 persons in the city proper, and over 1,000,000 persons in the immediate metropolitan area. The city serves as a center for business, health, educational, recreational, and cultural activities for the Mid-South area (Tennessee, Arkansas, and Mississippi). Most of the Consortium agencies are located within what is known as the Medical Center. This center contains the campus of the University of Tennessee Health Science Center, the University-affiliated Boling Center for Developmental Disabilities, Regional One Health, the Department of Psychiatry, and other related health service and education agencies. Most Consortium agencies not located in the Medical Center are only a few miles away.
The University of Tennessee Health Science Center, College of Medicine, Department of Psychiatry core faculty and staff are housed at the Department of Psychiatry’s main office suite as well as in such other geographic components as the Division of Child and Adolescent Psychiatry.

The Department of Psychiatry sponsors a range of services, including (1) a lowered-fee adult psychiatry clinic, largely staffed by psychiatry residents; (2) outpatient adult and adolescent sex offender program and program for children with sexual behavior problems (Sexually Abusive Behavior Program); and (3) an outpatient child and family training clinic administered by the Division of Child and Adolescent Psychiatry.

The University of Tennessee Health Science Center does not discriminate on the basis of race, sex, color, religion, national origin, age, handicap, or veteran status in the provision of educational opportunities or employment opportunities or benefits.

The University does not discriminate on the basis of sex or handicap in the education programs and activities which it operates, pursuant to the requirements of Title IX of the Education Amendments of 1972, Pub. L. 92-318, 504 of the Rehabilitation Act of 1973, Pub. L. 93-112 and the Americans with Disabilities Act of 1990, Pub. L. 101-336, respectively. This policy extends to both employment by and admission to the University.

Inquiries concerning Title IX, 504 and the Americans with Disabilities Act should be directed to the Office of Equity and Diversity at 920 Madison Avenue, Suite 420, Memphis, TN 38163, 901-448-2112. Charges of violation of the above policy should also be directed to the Office of Equity and Diversity.
CONSORTIUM

AGENCIES
The Boling Center for Developmental Disabilities (BCDD) is a federally-funded program identified as a University Center of Excellence in Developmental Disabilities (UCEDD) and a Leadership and Education in Neurodevelopmental Disabilities (LEND) program. As such, the BCDD provides interdisciplinary training for a variety of health professions, including psychology, developmental pediatrics, speech pathology, audiology, social work, nutrition, nursing and occupational or physical therapy. Clients are culturally diverse and typically present with complex developmental and medical problems. Interns will receive exposure to a variety of presenting problems in children, with emphases on early detection, differential diagnosis, and intervention for developmental disabilities such as Autism Spectrum Disorder, Intellectual Disability (formerly known as Mental Retardation), Global Developmental Delay, Attention Deficit/Hyperactivity Disorder, disruptive behavior disorders, Developmental Language Disorder, and less frequently internalizing disorders.

The BCDD Major rotation focuses on interdisciplinary evaluations (Psychology Clinic or Diagnosis and Evaluation Clinic) and diagnostic interviewing. A minor is available with similar content, but reduced hours. Minor rotations are contingent on the availability of supervising psychologists.

Participation in and presentations at the interdisciplinary educational and training seminars and interdisciplinary community education programs is required. In conjunction with the BCDD supervisor, each intern also presents and participates in the Brown Bag Lunch Series by selecting a recent professional journal publication relevant to the field of developmental disabilities and psychology and facilitating discussion among trainees and professionals. Participation in program evaluation activities is also required. Based on intern training background, opportunities may be available for interns to supervise others in assessment, or research.

Although not part of the weekly BCDD schedule, specialized programs available for observation are: Inborn Errors of Metabolism Clinic, Craniofacial Clinic, Scottish Rite Clinic for Childhood Language Disorders, Relative Caregiver Program, SIBSHOPS (Program) for siblings of children with developmental disabilities, and the UT Reproductive Health Clinic.

By participating in the BCDD rotations, interns will increase their skills in psychological assessment across childhood (infant, preschool, middle childhood, and rarely adolescence), with strong emphasis on children aged 5 years and younger. By the end of the rotation, the intern will move toward competency in multimodal assessment (i.e., intelligence, achievement, socio-emotional/behavior, and adaptive assessment measures), differential diagnosis, interdisciplinary or multidisciplinary team experiences, and diagnostic interviews.
Applied Behavior Analysis for Families Clinic at BCDD: The ABA for Families Clinic at BCDD is available as an add-on rotation. As a therapist in this program, you will coach parents of children with ASD in the implementation of ABA, including direct instructional techniques (e.g., Discrete Trial Training) and more naturalistic approaches (e.g., Pivotal Response Training). With a focus on skills acquisition programs that may be included in treatment planning include improving/increasing socialization (e.g., eye contact, greeting others, pretend play, answering social questions, emotion recognition, etc.); improving verbal and nonverbal communication skills (e.g., pointing, following eye gaze, requesting, etc.); and improving daily-living skills (e.g., putting on shoes, following one-step commands, hand washing, safety skills, etc.). Therapists will train parents in ABA data collection techniques and program monitoring. The therapist will also provide live, in-session coaching to parents and provide feedback regarding program implementation.

Research: BCDD psychologists are actively engaged in applied research, and interns may elect to have a research add-on with the BCDD. Most often this research focuses on differential diagnosis of Autism Spectrum Disorders, Intellectual Disabilities, Attention Deficit Disorders, or dual-diagnosis of these conditions. The reliability, validity, and overall psychometric utility of a variety of behavioral and cognitive instruments are closely examined in this process. While it is difficult for an intern to design a study, prepare paperwork for the Institutional Review Board, collect and analyze data, and write a manuscript during a single rotation, it is possible to join the psychologists’ on-going research projects. This usually requires a commitment that lasts more than one rotation. Interested interns should contact their BCDD supervising psychologist for the research add-on experience.
The UT Center of Excellence (COE) is part of a statewide network of pediatric referral centers established in coordination with Tennessee Department of Children’s Services (DCS) and TennCare (Tennessee’s Medicaid program) to serve children in state custody and those at risk of entering state custody. The UT COE is intended to assist DCS and community providers in West Tennessee by improving health and behavioral health services for these children through direct and consultative means. The UT COE is comprised of an interdisciplinary clinical staff, including psychiatry, psychology, developmental pediatrics, social work, and speech pathology. Referrals to the UT COE are made primarily from DCS case managers or juvenile courts. Referrals are made for the following reasons:

- When a case is complex and there are diagnostic and mental health concerns.
- When there are conflicting diagnoses among health service providers.
- When a comprehensive review of the child’s history (behavior, treatment, placement) would assist in determining the child’s current needs.
- When an evaluation or examination would add information needed for placement and treatment recommendations.
- When there is concern about a developmental delay.
- When there is concern about psychoactive medications.

Following an intensive case review, clinical interview, and possibly a more comprehensive evaluation, a Care Plan is developed that includes specific treatment and placement recommendations. The Care Plan is then discussed with the referrer, and others as appropriate, and consultative assistance is offered in implementing the recommended services.

Experiences at the UT COE include extensive record reviews; assessments (clinical interviews, psychological testing) of children and adolescents who are in or at risk of state custody; writing Care Plans, most often with multi-disciplinary team input; participation in multi-disciplinary case conferences; and consultation with DCS case managers, treatment providers, and caregivers. There are also opportunities to learn about Learning Collaborative model for disseminating evidenced-based treatments such as Trauma Focused-Cognitive Behavioral Therapy (TF-CBT) and Attachment, Self-Regulation, and Competency (ARC), into the community mental health system and about evaluating the effectiveness of the dissemination program. At the end of this rotation, an intern will have an increased understanding of issues related to child abuse and neglect, foster care, juvenile courts, and systems of care for children and adolescents.
Description:
The Parent-Child Interaction Therapy (PCIT) Clinic is maintained through the UT Center of Excellence for Children in State Custody (UT COE) and provides an evidence-based treatment model (Eyberg & Funderburk, 2011) with highly specified, step-by-step, live-coached sessions with both the caregiver(s) and the child. Caregivers learn skills through PCIT didactic/teach sessions, and, using a transmitter and receiver system (bug-in-the-ear device), the caregiver is coached in specific skills as he or she interacts in specific play with the child. The therapist provides coaching from behind a one-way mirror. The emphasis of treatment is on changing negative caregiver-child patterns by improving the relationship between caregivers and their children, and honing consistent discipline practices. PCIT is one of the most effective treatments known for children with behavior problems between the ages of 2 and 6 years.

The PCIT Clinic is managed and supervised by In-House Trainers and licensed psychologists who have training and expertise in the PCIT model. In the past, PCIT Clinic trainees have spanned the graduate, pre-doctoral, postdoctoral, and professional level.

The PCIT Clinic is an add-on experience that minimally requires a first and second rotation commitment from interns. This includes didactic and experiential trainings on the PCIT protocol, as well as direct clinical service provision with live supervision, which takes approximately 16-24 weeks per case to complete. The training model is consistent with PCIT International Training Guidelines for developing necessary competencies as a PCIT therapist.

Population Served:
The PCIT Clinic serves children functioning at the age of 2-6 years and their families. Primary/secondary diagnoses typically include disruptive behavior disorders, although children with Autism Spectrum Disorders, developmental delays, or internalizing disorders are also served. Clients are referred to the PCIT Clinic from Center of Excellence (COE) and Boling Center evaluations, as well as from the community. The typical population served is diverse in ethnicity and socioeconomic status.

Training Opportunities Available:
Interns gain experience working in a co-therapy dyad using an evidence-based treatment. Interns complete didactic training regarding the manualized treatment and systematic observational coding system. Interns participate in group supervision, session preparation, associated record-keeping, and direct service delivery with live supervision. Currently, the PCIT Clinic is available only as an Add-On Rotation.
The Division of Child and Adolescent Psychiatry offers a minor rotation for individuals interested in gaining experience in providing therapy to children and adolescents and their families.

The UT Child & Adolescent Psychiatry Psychotherapy Clinic is the primary psychotherapy training program of the Division of Child and Adolescent Psychiatry. It is organized to provide services to children, adolescents, and their families and to offer clinical training for psychology interns and psychiatry residents. Although the clinic is designed specifically to assist troubled children and adolescents, the emphasis is on a family approach to treatment. The philosophy of the clinic is to view each person as an important part of a total family system, not as an isolated individual. This approach reflects the belief that the family can provide the strongest support for the patient and stimulate and hasten the process of change.

Experiences in the clinic will include family and individual therapy with children and adolescents of all ages and presenting problems. Multidisciplinary staffing and teaching conferences are also available. Supervision generally includes individual and group models as well as live supervision. Reading material regarding child and family therapy will be provided, and trainees will have the opportunity to observe one another during therapy sessions to increase opportunities for learning.
General Description
The Exchange Club Family Center is a private, non-profit child abuse and domestic violence prevention and treatment agency. In efforts to intervene in abusive and violent family situations, and to prevent the perpetuation of a pattern of family violence, the Center provides therapeutic, educational, assessment and support services to over 5000 children and families in Shelby and surrounding counties. The population served includes families in which child abuse or neglect is either suspected or has been substantiated; children, teens and adults presenting with anger and aggression problems; individuals suffering from the effects of past abuse; and at-risk populations for the development of abusive relationships. The Center has active clinical services programs including individual and group therapy, assessments, psycho-educational classes, and community outreach programs as well as opportunities to work on several research projects. Interns rotating through our site receive training experience in individual therapy across age groups, marital and family therapy, and group interventions with children, adolescents, and adults. Assessment experience is available through the DVAC program (Domestic Violence Assessment Center), which is a unique evaluative program to assess risk of ongoing violence in court-referred batterers. Interns will interact with students from several undergraduate and graduate social work and psychology programs in the tri-state area with opportunities for task supervision and co-therapy. Individual and group supervision are held weekly for all trainees.

During this rotation, interns will have the opportunity to increase their competency in identifying clinical issues and appropriate treatment interventions with clients experiencing child abuse, neglect, and domestic violence. Interns will also gain experience in coordination of care for clients interfacing with multiple legal and community agencies and systems, increasing their awareness of community resources and advocacy for clients. Competency in client diversity relative to culture, ethnicity, and socio-economic status will be enhanced as well.

Required Hours
Days and times are flexible

Rotation Expectations (Minor only)
Minor Rotation
Involvement in 1-2 agency programs. Task supervision with program director.

Maintain a caseload of 2-3 clients including counseling once per week, case management, and necessary record keeping. One hour of supervision each week with clinical director.
Exchange Club Family Center Programs

Assessment Programs
DV Assessment Center – court ordered assessment of domestic violence offenders; reports and recommendations are used to help determine disposition/sentencing

Anger Management Programs
Children Learning Useful and Effective Skills (CLUES) – psycho-educational group for ages 8-12
Teen Anger Management (TAME) – therapeutic group for adolescent females
Male Adolescent Program (MAP) – therapeutic group for adolescent males
Training Intervention for Parents (TIPs) – therapeutic group for parents of TAME and MAP participants
Female Anger Management Program (FAM) – psycho-educational class for adult women
Male Anger Management (MAM) – psycho-educational class for adult men

Prevention and Intervention Programs
Counseling – individual, marital, and family therapy
Play Therapy – non-directive, individualized treatment with young children
Children’s Domestic Violence (CDV) – group counseling with children exposed to DV
HEALTHY LIFESTYLE CLINIC (HLC)
Le Bonheur Children’s Hospital

(Minor Rotation)

General Description
During this minor rotation, the intern will provide assessment, treatment, and consultation in an outpatient pediatric hospital setting. The Healthy Lifestyle Clinic (HLC) is an interdisciplinary pediatric weight management clinic comprised of medicine, nutrition, exercise, physiology, and behavioral health. The behavioral health team supports patients and their families by identifying barriers to adopting and maintaining healthy lifestyle changes recommended by the HLC team. Individual, family, and group based modalities are offered.

Hours
Minor Rotation – 2 half days per week

Tuesday: 8:00am – 12:00pm; 1:00pm – 5:00pm
Wednesday: 8:00am – 12:00pm; 1:00pm – 5:00pm
Thursday: 1:00pm – 5:00pm

Expectations
Conduct psychosocial assessments of children, adolescents, and their families with obesity and obesity-related medical conditions (e.g., type 2 diabetes, hyperlipidemia, hypertension).

Provide obesity-related intervention for children, adolescents, and their families, informed by cognitive behavioral therapy, dialectical behavior therapy, motivational interviewing, and other evidence-based treatments.

Provide consultation to HLC providers and other medical providers involved in the care of HLC patients and their families.

Facilitate group-based obesity interventions in collaboration with registered dietitians and exercise physiologists.

Complete written documentation of all clinical interactions in a timely fashion.

Complete assigned readings.

Present one article on psychological aspects of pediatric obesity at the weekly Obesity Research Journal Club.

Supervision of the intern’s clinical work will be in vivo and include direct observation of interactions with patients as well as documentation.
The Juvenile Court of Memphis & Shelby County is one of the largest and busiest urban courts in the state. Thousands of children are seen in the Court every year on matters relating to delinquency, unruly behavior, and dependency and neglect. There are several Offices, Bureaus, and specialized service areas within the Court, including the Office of Clinical Services.

The Office of Clinical Services offers a major rotation (24 hours/week) for interns interested in gaining experience in assessment of youth against whom delinquent/unruly complaints have been lodged. Psychological evaluations are conducted pursuant to Court order for youth who are facing possible transfer of their cases to adult Criminal Court. The children ordered to participate in assessments are high-risk youth who typically have serious charges, including First Degree Murder. Evaluations address such issues as personality, intellectual, and achievement functioning; psychopathology; adaptive functioning; substance use; history of trauma; psychosexual development; dynamic risk factors for re-offense and corresponding rehabilitation needs; and malingering.

The assessment goals of the Office of Clinical Services are to (1) assist with the identification of mental health and other special needs and risks in Court-involved youth, and (2) offer recommendations to the Court regarding treatment, psychoeducational, vocational, mentoring, and/or other intervention services, and further specialized evaluation if indicated.

Experiences in the Office of Clinical Services include clinical interviews, psychological testing, collateral interviews and record review, risk assessment, case consultation, and comprehensive written psychological evaluations of adolescents.
MEMPHIS PSYCHOTHERAPY CENTER
(Add-on Rotation)

Memphis Psychotherapy Center is a private practice office located at 1331 Union Avenue, Suite 834, in the midtown area of Memphis.

Training opportunities are provided to learn about various issues related to private practice. These issues include billing, third-party reimbursement, business organization, legislative information, accounting practices, referrals, personal financial management, and private practice ethical issues. Emphasis is placed upon the private practice of clinical psychology, and although therapy concerns will, of course, be addressed, organizational issues related to private practice including dealing with PPO’s and managed care agencies will receive a major focus.

Intern training in the Memphis Psychotherapy Center is most appropriate for those who have a career interest in private practice and offers the intern opportunities to confront issues before being faced with the development of an independent practice of his/her own.
The Memphis VA Medical Center is a tertiary care facility with a large and expanding outpatient primary care program. The medical center provides a full range of care to medical, psychiatric, rehabilitation, spinal cord injury, and surgical patients. It is designated as a Dean's Committee facility and, therefore, maintains a strong teaching affiliation with the University of Tennessee Health Science Center, College of Medicine.

The Psychology Section of the Mental Health Service houses the Psychology Training Program that, in addition to being a member of the Consortium, is independently accredited by APA. In addition to the eight predoctoral internship positions, the Psychology Training Program offers nine postdoctoral fellowship positions. Applicants who wish to be considered for selection as a funded VA intern should apply directly to the Memphis VAMC Internship Training Program.

The Psychology Training Program staff currently includes 29 doctoral-level psychologists and two clinical social workers. The staff is heterogeneous in terms of educational and theoretical backgrounds, which makes possible a wide range of orientations for instruction, observation, role modeling, and professional development. Members of the psychology staff participate fully in the psychiatry, spinal cord injury, primary care, medical, surgical, and consultation services of the Medical Center.

Training experiences are offered to psychology interns in the areas of medical/health psychology, clinical psychology, and neuropsychology. Training opportunities in clinical psychology include inpatient and outpatient psychiatry, PTSD, family therapy, chemical dependency, and group and individual psychotherapy. Opportunities for training in medical/health psychology are in the areas of pain management, oncology, geriatrics, palliative care, primary care medicine, polytrauma, women's health, health behavior coaching, home health, and spinal cord injury. Neuropsychology training includes opportunities with both inpatient and outpatient populations.
ST. JUDE CHILDREN’S RESEARCH HOSPITAL
DEPARTMENT OF PSYCHOLOGY

(Major Rotation)

St. Jude Children’s Research Hospital is a private, non-profit children’s research hospital and is one of the world’s premier pediatric cancer research centers. Approximately 7,800 active patients are seen at St. Jude each year, most of whom are treated on a continuing outpatient basis as part of ongoing research programs. The hospital also has 78 beds for patients requiring hospitalization during treatment. St. Jude has treated children from all 50 states and from around the world.

The Department of Psychology at St. Jude provides training in assessment and intervention with children, adolescents, and young adults with catastrophic illnesses including cancer, sickle cell disease, other hematological disorders, and HIV/AIDS. Approximately 1,100 assessments and 550 initial consults are conducted each year, with ongoing psychological care provided to many of these patients. Current staffing includes 12 doctoral level psychologists, 5 neuropsychologists, 4 master’s level senior psychological examiners, and 8 postdoctoral fellows. Interns will be assigned a primary supervisor but will have opportunity to be supervised by multiple attending psychologists and neuropsychologists during the course of their rotation.

For the Pediatric Psychology Track, clinical training opportunities include, but are not limited to, clinical and research-protocol driven psychological assessment, inpatient consultation/liaison, inpatient/outpatient individual and family therapy, non-pharmacological pain management interventions, health and behavior assessment and intervention, procedural distress, and pill swallowing training. Participation in medical, psychosocial, and psychology rounds is available to trainees. Interns will be required to attend a weekly psychology trainee didactics meeting and psychology grand rounds.

During this rotation, interns should become proficient in the administration, scoring, and interpretation of psychoeducational assessment batteries with infants/toddlers, children, adolescents, and young adults. Specific training will be provided in the impact of illness and treatment on children’s cognitive abilities, memory, attention, and learning. Interns will gain expertise in the delivery of cognitive-behavioral and behavioral interventions to address typical presenting problems in pediatric populations. Proficiency will also be developed in consulting and collaborating with multi-disciplinary teams, including physicians, nurses, social workers, rehabilitation professionals, and others involved in the care of their patients.

For the Pediatric Neuropsychology Track, interns will gain experience in comprehensive neuropsychological assessment that includes the following skills: medical record review (including access to repeat neuroimaging), clinical interviewing to ascertain pertinent historical information, administration and interpretation of neuropsychological instruments, case conceptualization including integration of brain-behavior relationships, provision of feedback to patients and their families, comprehensive report writing,
consultation with health care professionals, and development of recommendations that seek to ameliorate the impact of brain dysfunction on academic and social functioning. Clinical populations served by St. Jude present with a wide-range of cognitive difficulties (focal and diffuse neurological insult related to primary diagnosis and/or treatment) including problems with attention, executive functioning, memory, language, visuospatial reasoning and psychosocial adjustment that will afford interns with broad-based training. Patients range in age from birth through young adulthood. Interns will have the opportunity to participate in school re-entry planning and Individualized Education Program (IEP) development, often in coordination with the St. Jude School Program.

Other clinical opportunities for the pediatric neuropsychology intern include, but are not limited to, early childhood assessment and service coordination, abbreviated neuropsychological screeners (e.g., with children and adolescents with Sickle Cell Disease), brief bedside assessment with inpatients for monitoring recovery following acute neurologic events, brief therapeutic interventions and cognitive remediation, and consultation with medical providers, rehabilitation professionals, school personnel, child life specialists, and social workers. Interns will be expected to attend a bi-monthly neuropsychology trainee didactics meeting and psychology grand rounds. Opportunities for attending pediatric psychology trainee didactics and multi-disciplinary team rounds are available.

One intern will be matched to the St. Jude Pediatric Psychology Track and one to the St. Jude Neuropsychology Track. Each intern will complete two major rotations at St. Jude. Other interns from the General program will have the opportunity to rotate at St. Jude with minor rotations, as well. All interns have the opportunity for research or clinical assessment add-ons at St. Jude.
The West Tennessee Forensic Services, Inc. provides forensic mental health evaluation services to the Shelby County Juvenile and Adult Courts and the State of Tennessee Criminal Courts (in Memphis). This program provides forensic/mental health evaluations of defendants facing criminal charges (a full range of charges from minor misdemeanors to capital murder). The Forensic Team consists of three psychologists and a licensed/certified social worker. Most members of the team have worked this contract together for over 30 years.

All of our evaluations are completed pursuant to a court order. The team is considered a “friend of the court,” not a member of either the defense or prosecution team. The evaluations consist of assessing a defendant’s competency to stand trial and mental condition at the time of the alleged offense. Typically, an intern becomes involved in all aspects of the evaluation, including interview, mental status examination, evaluation of specific forensic issues, psychological testing, hospital follow-up services, consultation with defense and prosecuting attorneys and courtroom testimony.

One intern representative
INTERN FUNDING AND POLICIES

A variety of funding arrangements are utilized. Recent sources include the Boling Center for Developmental Disabilities, Juvenile Court of Memphis and Shelby County, St. Jude Children’s Research Hospital, and the UT Center of Excellence for Children in State Custody. These are likely to be the funding sources for the upcoming year as well, so interns will be required to complete rotations at these sites. The number of funded internship slots will depend upon monies available. Approximately five funded intern positions are expected by the Consortium and seven by the VA Internship Program. The Consortium internship stipend is $20,300. Health insurance is provided.

Attempts are made to match funding sources to interns' training needs. A total of 1900 hours are required with 1200 of these being committed training time, non-optional, to agencies providing funding. The remaining hours will be elective time that can be in any of the Consortium agencies or at the VA. VA funded interns will have first choice at the various VA rotations while the Consortium funded interns will have first choice for rotations at cooperating agencies. If applying to both programs, the UT Consortium and the VA, a separate application should be forwarded to the VA Training Program.

All Consortium interns are UT employees and have access to library facilities, technical support, etc. The Administrative Assistant for the Consortium is available to assist interns with record keeping and other administrative internship matters. The Consortium follows the UT holiday and closing calendar. In addition to University closings, interns may take up to 10 days of professional leave during the training year. Five of those days may be taken consecutively. Leave must be specifically arranged and approved by the intern’s current supervisors as well as the Training Director.

Interns are provided with appropriate office space, computer access, and administrative support at each training site. Availability of an automobile is a necessity.

This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept or use any ranking-related information from any intern applicant.
APPLICATION PROCEDURES

Applications should be completed by November 15, 2017. The complete application consists of the following:

(1) APPIC Application for Psychology Internships Online (AAPI Online)
    Note: All letters of recommendation must utilize the APPIC standardized reference form

(2) Program Interest and Rotation Preferences (please indicate in the table on page 45 and include the table in your cover letter)

A VA Psychology Internship Training Program brochure is available through Karen Clark, Ph.D., VA Medical Center, Psychology Section (116A), 1030 Jefferson Avenue, Memphis, TN 38104. You may apply separately to the VA Internship, as well as to the Consortium as a whole. All individuals applying for the VA Internship Training Program should submit a Form 171 (Standard Civil Service Form) to the VA, and make application directly to the Memphis VA Medical Center.

The Consortium administration understands the importance to intern applicants of the opportunity to visit prospective internship sites. Because of the large number of requests for site visits, in-person interviews will only be conducted with those invited by the Consortium. Offers of interviews will be made during the first two weeks of December and 4 interview days will take place during the month of January 2018. It is estimated that 40 to 50 intern applicants will be invited for site visits. If you are also applying to the VA Internship Program, then you should contact Dr. Karen Clark at 901-523-8990, Ext. 2376, regarding the VA’s interview policy.

Offers will be made and accepted in agreement with the match policies developed by the Association of Psychology Postdoctoral and Internship Centers (APPIC).

It is suggested that only those persons apply who give this setting a very high priority in their preference for internship.

Applicants who do not appear to have a high likelihood of receiving an internship offer will receive appropriate guidance during the application process.

The starting date is August 13, 2018. Finishing date is August 9, 2019.

Accepted applicants will receive additional orientation information prior to the starting date.
As required by APA, following is information regarding admissions expectations, program support provided to interns, and initial post-training placement.

**Date Program Tables are updated:**  7/20/2017

PROGRAM INTEREST AND ROTATION PREFERENCES

As noted in this brochure, the University of Tennessee Professional Psychology Internship Consortium has three programs: the General program, the St. Jude Pediatric program, and the St. Jude Neuropsychology program. Interns in the St. Jude programs will spend two major rotations and one minor rotation at St. Jude Children’s Research Hospital. Their other major rotations and minor rotations will be through other agencies in the Consortium. Interns in the General program will rotate through various agencies in the Consortium. Rotation assignments for all interns, regardless of program, are based on training needs and intern preferences as well as funding provided by Consortium agencies. We anticipate receiving funding from the Boling Center for Developmental Disabilities, UT Center of Excellence for Children in State Custody, and Juvenile Court for the coming training year. Thus, interns in the General program can expect to be required to complete rotations at these sites.

We ask that you specify which program or programs you wish to be considered for and to then rank your rotation preferences. Please note that we are not asking you to rank order the programs (General and St. Jude); we are only asking you to designate which of the programs you want to be considered for. Instead, we are asking for you to rank your rotation preferences, which will help us to identify your training interests.

PLEASE INDICATE WHICH PROGRAM(S) YOU ARE APPLYING TO (General, St. Jude Pediatric, St. Jude Neuropsychology) IN YOUR COVER LETTER. ALSO, PLEASE RANK ORDER YOUR ROTATION INTERESTS/PREFERENCES IN THE TABLE BELOW AND INCLUDE THE TABLE IN YOUR COVER LETTER.
PROGRAM(S) APPLYING TO:

- General
- St. Jude Pediatric
- St. Jude Neuropsychology
