For more information about the UTHSC College of Dentistry, please contact the UTHSC Alumni Affairs Office.

To contribute to the UTHSC College of Dentistry, please contact the UTHSC Alumni Affairs Office.
The end goal of UTHSC College of Dentistry education is to be out in the world, providing the best care possible to patients. As dean, I am pleased to tell you that the College of Dentistry is truly out there, and in the best possible ways. We are meeting the challenge to look beyond traditional roles and services, making Tennessee's dental school, year dental school, a national leader in education, clinical care, public service and research. Here's how.

Over the past few years, we have expanded the oral care services we offer. Some of these opportunities are technology driven, some are the result of research. Others, like the newly-opened hemophiliac clinic, (see page 20) come through collaborative efforts with other health care professions.

Now that the funding for our new dental annex has been approved by the state, I am excited to report that the final plans for this long-awaited building are now in the works. With additional space, the College of Dentistry will be home to many of these forward-reaching, non-traditional services, like the Special Needs, the Slagle Oral-Facial Pain and the Obstructive Sleep Apnea clinics. We are planning a ground breaking ceremony in the Spring of 2017 with completion expected in 2018.

Through example and through participation, the College of Dentistry continues lead the way in service that reaches out into the community. For years, our students and faculty have routinely traveled into the Memphis area providing oral exams. In fact, the report of our UT Grassroots Oral Health Outreach initiative lists participation in 47 different local events. One of these was the first-ever Mid-South Mission of Mercy. Held this past February, our faculty, staff and students were out in force to support the heroic, charitable efforts our UT alumni and the Memphis Dental Society members who spearheaded this event.

I am glad to tell you that with the addition of our off-campus clinics, our future dentists and dental hygienists are providing dental services across the state to the underserved, and this fall, students will now take part in two-week clinical rotations in Chattanooga.

The educational opportunities and clinical resources we offer are varied, forward-thinking, utilizing the newest technologies and techniques. This is the case with our anaplastology services that are featured on page 20. Even though oral and facial prosthetics have been made for decades, you can read about how the techniques and materials our own Maddie Singer employs are cutting edge.

This spring, we sent 123 dentistry and dental hygiene graduates out into the world. This fall we welcomed the dentistry Class of 2020, and here is how our new dental hygiene students and those in our anaplastology services that are featured on page 20, are being prepared to deliver state-of-the-art patient care and public service.

The College of Dentistry Vision Statement
To improve human oral health through education, research, clinical care and public service.

About the UTHSC College of Dentistry

The UTHSC College of Dentistry was founded in 1878 – making it the oldest dental college in the South, and the third-oldest public college of dentistry in the United States. The college is located in the Memphis medical district in the Winfield C. Dunn Dentistry Building, named for the college’s distinguished alumnus and former Tennessee governor.

The college maintains a four-year dental program enrolling approximately 420 dental students, dental hygiene students and those taking part in postgraduate dental programs. The college is dedicated to providing professional, graduate and postgraduate education; conducting dental research; and delivering state-of-the-art patient care and public service.

The University of Tennessee Health Science Center

As Tennessee’s only public, statewide, academic health system, the mission of the University of Tennessee Health Science Center (UTHSC) is to bring the benefits of the health sciences to the achievement and maintenance of human health, with a focus on the citizens of Tennessee and the region, by pursuing an integrated program of education, research, clinical care, and public service. Offering a broad range of postgraduate and selected baccalaureate training opportunities, the main UTHSC campus is located in Memphis and includes six colleges: Dentistry, Graduate Health Sciences, Health Professions, Medicine, Nursing and Pharmacy. UTHSC also educates and trains cohorts of medical, pharmacy and/or health professions students – in addition to medical residents and fellows – at its major sites in Knoxville, Chattanooga and Nashville. Founded in 1911, during its more than 100 years, the UT Health Science Center has educated and trained more than 57,000 health care professionals in academic settings and health care facilities across the state. For more information, visit www.uthsc.edu.

Follow us on Facebook: facebook.com/uthsc, on Twitter: twitter.com/uthsc and on Instagram: instagram.com/uthsc.

Standing next to former Gov. Winfield Dunn in August as we unveiled a beautiful bronze bust in his honor in the College of Dentistry, I was humbled by his accomplishments and proud to call him an alumnus of our university. I was also reminded of all our outstanding alumni, and grateful for their support of UTHSC.

As the chancellor of this university, I am proud to tell you about the great things going on at UTHSC, and in particular, in the College of Dentistry. All across the university, we are working diligently to make a difference in our community. In doing so, we are raising the profile of UTHSC as a health care educator, provider and innovator on the local, state, national and global stage. This magazine is filled with examples.

You’ll read how as an institution:

• UTHSC serves as the hub of the revitalization of the Memphis Medical District, with our Executive Vice Chancellor and Chief Operations Officer Ken Brown serving as vice chair of the collaborative of academic, business and health care institutions bringing new energy and attention to this vital area. (page 6)

• We continue to update and expand our campus with new construction, including our state-of-the-art Interdisciplinary Simulation and Patient Safety Center. When it opens in 2017, students from all six colleges on campus will train together in simulation settings to deliver team-based health care – the model for quality care. (page 8)

• We contributed to the community again this year by hosting the annual Back-to-School Family Affair, a health fair designed to give area children and families the best start on the new school year. (page 9)

You’ll also see how your college:

• Played a key role in the Mid-South Mission of Mercy that brought free dental services to more than 2,000 people. (page 26)

• Is serving patients with blood disorders, including hemophilia, through new a clinic launched in collaboration with the College of Medicine. (page 24)

• Is working to expand its reach abroad by pursuing a new international exchange program for students. (page 10)

You’ll also read how one instructor, anaplastologist Maddie Singer, is helping make patients whole through her artistic and realistic prostheses. (page 20)

The UTHSC administration is proud of what we have accomplished together and committed to progress in the future.

Many thanks for all you do to support UTHSC.

Steve J. Schwab, MD
Fellow Alumni,

As I begin my role as Alumni Board president, I am proud to serve with this great group of alumni. The College of Dentistry has been our anchor since each of us began our dental career. Founded in 1878, we are proud that it is the oldest dental college in the South, and the third oldest public college of dentistry in the United States. Throughout our history, we have been fortunate to remain on the cutting edge in dentistry education, research and practice. Our history is indeed rich, and, as you will read on the following pages, the future of dentistry and the college is tremendously exciting.

When I think about the upcoming plans for our college, and its dental students, I am proud to be an alumnus of UTHSC College of Dentistry. These plans start with the construction of a new building to be named in honor of Delta Dental of Tennessee. We are grateful to Dr. Phil Wenk and the support of Delta Dental and the Smile180 Foundation for helping to make this building a reality. Read about what lies ahead on page 11.

If you were not able to join us for the 2016 William F. Slagle Dental Meeting, I encourage you to make plans now to attend in 2017! This year’s program was full of information and camaraderie. The events were well planned from start to finish.

If you are a graduate from the Class of 1966, join us in Memphis for the 2016 Golden Graduate Homecoming for all six UTHSC colleges. If you have not travelled back to visit UTHSC in some time, Memphis is a wonderful city with a rich history and much to offer. You will see many things that are familiar and a number of things that have changed.

As you read through this magazine, I ask you to think about how you can provide support to the college. As an alumnus you have secured your spot in our rich history. You can also ensure a rich future, whether it is through volunteering or giving – or both!

We thank you for your support.

Sincerely,

Walter Gene Jines, DDS ’75

UTHSC ready to anchor change in Memphis Medical District

As a result of intensive internal planning and strategic growth, the University of Tennessee Health Science Center is primed to serve as an anchor for change in the community that surrounds it. Executive Vice Chancellor and Chief Operations Officer Ken Brown, JD, MPA, PhD, FACHE, told an international conference of university, civic and government leaders.

Dr. Brown was a guest speaker at the International Town & Gown Association (ITGA) 2016 Annual Conference in Memphis. He highlighted our Campus Master Plan that serves as the roadmap for future growth, and discussed UTHSC’s role as an urban academic medical center and driver of the medical district revitalization.

In August 2015, Dr. Brown was invited by the Association of American Medical Colleges to serve as a leader of a webinar on campus planning. His presentation used the UTHSC master plan to discuss the use of data in master planning.

The leadership of some of Memphis’ most significant health care and higher education institutions, as well as community leaders from the Edge District and Victorian Village, has launched a new organization to direct the future development of the Memphis Medical District. The Memphis Medical District Collaborative (MMDC) will now be responsible for a series of strategic programs to make the district more vibrant, economically prosperous, clean and safe.

“The time is right for us to work together in a more focused way around a common vision for the area’s future,” says Gary Shorb, chairman of MMDC Board of Directors and CEO of Methodist Le Bonheur Healthcare.

There are some immediate steps we can take to improve the district’s livability and safety, and some longer-term actions that will require sustained investment and focus. Our challenge ultimately is to connect to the development happening throughout Midtown and Downtown while improving the vibrancy within the larger Medical District.”

“The Medical District employs more than 16,000 people and has more than 8,000 students, many of whom commute into the district. The district is also responsible for more than $1.2 billion dollars in purchasing and procurement, and we have lots of opportunities to keep those dollars reinculating within the district,” said Pacello. “If we can work with the institutions to design strategies to buy local, live local, and hire local in a more intentional way, we can boost property values and create more opportunities for locally-owned businesses. That benefits the entire city.”

The formation of MMDC comes at a critical time for the district, which will be the site of some $3 billion in public and private investment in the coming years, thanks to ambitious new campus development plans by UTHSC, St. Jude Children’s Research Hospital, Methodist Le Bonheur Healthcare and others.

About the new Memphis Medical District Collaborative

MEMPHIS MEDICAL DISTRICT

The University of Tennessee Health Science Center

As a result of intensive internal planning and strategic growth, the University of Tennessee Health Science Center is primed to serve as an anchor for change in the community that surrounds it. It’s a family affair

Sponsored by Omega Ministries/Omega Healthy Practices and the Healthcare Organizations of Greater Memphis Coalition, the 28th annual Back-to-School Family Affair was hosted by UTHSC on July 16 in the Student-Activity Center.

Originally started as an event that assisted 150 children from the Memphis area, it has grown to serve more than 1,000 from all over the Mid-South by offering free health screenings, physical exams, immunizations, along with dental, vision and blood pressure screenings. UTHSC has participated in the event for more than 20 years, and two years ago began doing a school supply drive several weeks before the event on campus to equip students for the new school year. Altogether, 13 drop-off locations were set up throughout campus several weeks before the event. UTHSC also donated 1,000 backpacks that were filled with school supplies and then given away to students.

The event, which is held each July, brings together health care professionals and student volunteers from organizations including the UTHSC Colleges of Dentistry, Nursing and Pharmaceutical Sciences, Baptist Memorial Hospital Methodist Le Bonheur Healthcare, Regional One Health, Shelby County Health Department, Little and many more to provide health care to the children in attendance regardless of whether their families are insured or uninsured. Among the services provided, 161 physical exams were done by the College of Nursing, and 194 dental screenings were performed by the College of Dentistry.

“My goal when we got started was to make the event one that is fun and welcoming to kids. We wanted to make sure that we supplied them with as many resources as we could,” said Pam Houston, UTHSC director of special events and coordinator for the event.

“If we can do anything to minimize obstacles that so often hinder a successful school year for our youth, we are supporting a portion of our mission. This is our call and our responsibility.”

UTHSC College of Health Professions dean named special advisor to UT system president

Noma Anderson, PhD, former dean of the College of Health Professions at UTHSC since 2010, has been named special advisor on diversity and inclusion to UT System President Randy Boyd. Dr. D’Pietro announced the appointment to the Academic Affairs and Student Success Committee during the UT Board of Trustees meeting held June 23-24 in Knoxville.

Dr. Anderson has served as chair of the president’s Diversity, Academic Affairs and Student Success Committee (DACS) since 2012. This new responsibility effective July 1, when Dr. Anderson will report to the Office of the Provost as its dean. This new position is expected to focus on the health professions in the College of Health Professions.

“Dr. Anderson has been a dynamic college dean and has been a driving force in the College of Health Professions growth in the College of Health Professions. Founded in 1972 as the College of Allied Health Sciences, the College became the College of Allied Health Sciences in 1985. Dr. Anderson has been a major asset to our College of Health Professions and the College of Medicine. We are pleased that she will be part of our leadership team, and we will have the opportunity to share her extensive talents with the entire UT System.”

Dr. Anderson has a distinguished academic and clinical history. She served as the chair and a professor in the Department of Communication Sciences and Disorders at the University of Florida in Gainesville. She was also dean of the School of Health Professions at Florida International University in Miami. She has served in many capacities at UTHSC and is a leader in her field.

She will continue in her role as special advisor on diversity and inclusion to the Office of the President until July 1.

Meet the center’s new executive director

Chad Epps, MD, was a high school teacher before he became a physician. As the new executive director of the Interprofessional Simulation and Patient Safety Center, Dr. Epps will combine his expertise as a physician and a facilitator to improve education for future health care professionals and the quality of care their patients receive.

Dr. Epps, who trained in anesthesia at the Mount Sinai School of Medicine in New York and completed a fellowship in Pediatric Patient Simulation at Mount Sinai Human Emulation Education and Evaluation Lab for Patient Safety and Professionalism, began his new job at UTHSC on June 1.

Most recently, Dr. Epps has served as the associate director for the Office of Interprofessional Simulation at the University of Alabama at Birmingham (UAB), and as an associate professor with academic appointments in four schools there – Medicine, Health Professions, Nursing and Engineering. He received his medical degree from the Medical College of Georgia School of Medicine in Augusta.

“People have always been the heart of an educator,” Dr. Epps said.

“I was exposed to the powerful effects of simulation during my residency in anesthesia, I was so drawn to it as an educational modality that I completed a fellowship in simulation, and have been working in health care simulation ever since.”

Graduation 2016

In May, UTHSC graduated 779 new health care professionals at separate ceremonies for each of its six colleges. The graduate count by college is:

- Dentistry - 123
- Graduate Health Sciences - 87
- Health Professions - 188
- Medicine - 158
- Nursing - 81
- Pharmacy - 152

“We’re proud of our graduates,” said Lori Gonzalez, PhD, vice chancellor for Academic, Faculty and Student Affairs. “We know that these individuals will positively impact health care as they become practitioners or providers.”

Dr. Gonzalez noted that this year’s graduating class of 779 is a significant increase in number over last year’s class of 698 graduates. “UTHSC is committed to improving the health of Tennesseans, as evidenced by the increased number of graduates – an increase of roughly 10 percent over last year,” she said.

“Our mission is to improve the health of the citizens of Tennessee, and these graduates are not only going to do that, they’re going to become leaders in their communities.”

Turn to page 14 for the College of Dentistry graduation photo gallery.
From dream to reality

Feb. 1 was a landmark day in the life of the UTHSC College of Dentistry as Gov. Bill Haslam made his 2017 budget proposal, SB2653. It included $39 million to build a new College of Dentistry annex and to renovate the college’s existing facilities. On April 21, the governor signed the bill, making the funding for the long-awaited building a reality.

Currently the plans for the building are being fine-tuned, and preparations for the groundbreaking are being made. The 80,000 square-foot, four-story building will house classrooms and laboratories, along with faculty and administrative offices. It will feature a special needs clinic to care for both children and adults who are not able to receive dental care in a traditional practice setting.

The Smiley180 Foundation commits funding for new Dunn Building Annex
The College of Dentistry has also secured a pledge in support of the new building from the Smiley180 Foundation, the philanthropic arm of Delta Dental of Tennessee. Earlier in the year Delta Dental President and CEO Phil Wenk, a 1977 graduate of UTCOD, signed the official agreement that will provide a naming opportunity for the building.

Shown signing the agreement from left to right are Dean Tim Hottel, Dr. Phil Wenk, UTHSC Chancellor Steve Schwab, UTHSC Executive Vice Chancellor and Chief Operations Officer Ken Brown.

Terry Propper, DDS ’82, was surprised by the Benco Family Foundation with a gift in her honor to support the special needs dental clinic that will be a part of the new dentistry annex. The presentation was made in front of the more than 800 in attendance at the 2016 Benco Sales Forum held in March. If you would like to know more about the special needs clinic, or the Women’s Initiative, please contact Will Whiting at (901) 448-5516.

Shown from left to right are: Julie L. Radzynski, Benco vice president of Business innovation; Kealy Akin, former Benco territory representative; Dr. Propper and Charles F. Cohen, Benco managing director.

Foreign Affairs

The College of Dentistry has been successful in expanding its reach across the state. It is now looking to broaden its reach internationally through a new study abroad program.

Representatives from the European Union (EU) recently presented a proposal to Chancellor Steve J. Schwab and Dean Timothy L. Hottel, for funding international exchange programs through the European Community Action Scheme for the Mobility of University Students (ERASMUS) program. If an agreement is finalized, UTHSC will be the first school in the United States to participate in the study abroad program, which is funded by the EU. Through the initiative, the College of Dentistry will have the opportunity to collaborate with ERASMUS on enhancing international student exchange in both academics and research. The program will allow the College of Dentistry to send students or staff to participating institutions or host them. Since the 1980s, the ERASMUS exchange program has been providing students and higher education teaching staff in the EU the opportunity to go abroad while completing their degree. The program is currently offered in 33 countries. Students who study abroad have shown better adaptability working in a multicultural environment, and the College of Dentistry has welcomed students from other countries. In the past, the College of Dentistry has hosted Bulgarian dental students through the Global Oral Health Institute, a network of dental schools across the globe offering predoctoral students the option of participating in a global dentistry clinic during their senior year. Neil Dilкова, a dental student from Bulgaria who participated in the program, said of her experiences at UTHSC, “We made wonderful friends, and we hope that it will be a lifetime friendship.” The College of Dentistry will welcome new students from Bulgaria in September.

The College of Dentistry is committed to UTHSC’s mission of public service, and currently has service opportunities for its students to go abroad. Trips to El Salvador and Haiti are just a few examples of past global outreach by the college. “We want our students to go abroad, to take our dentistry practices, and go out and treat people who are underserved,” said Dr. Hottel.

In 2009 Dunn Dental Building renovations begin.

The need for more space for the College of Dentistry was identified more than seven years ago. Shown in this timeline are important dates in the process of bringing the dream to a reality.

Planning funds requested for the new building requested and approved in 2015.

A funding request is made to the State Legislature in the spring of 2015. It is deferred until 2016.

Legislature approves building funds for the construction in 2016.

Groundbreaking is to take place in Spring of 2017.

The building completion is planned for Fall 2018.

In 2015 Conceptual renderings are drawn.

Need assessment begins and ideas for the use of space are formed.

Shown from left to right are Dean Tim Hottel, Dr. Phil Wenk, UTHSC Chancellor Steve Schwab, UTHSC Executive Vice Chancellor and Chief Operations Officer Ken Brown.

If you would like to know more about the special needs clinic, or the Women’s Initiative, please contact Will Whiting at (901) 448-5516.

DeSchepper, DDS, MAEd, MSD, associate dean of Academic Affairs; Timothy Hottel, DDS, MS, MBA, dean, all from the UTHSC College of Dentistry. Visitors from the EU pictured are: Stefan Kostianev, MD, PhD, DMS, director and professor; Marianna Murdjeva, MD, PhD, vice chancellor of international relations and professor; Bogomil Andonov, DDS, MDS, assistant professor operative dentistry and endodontics. Chris Ivanoff, DDS, associate professor in Bioscience Research and director in Global Outreach in the UTHSC College of Dentistry is at far right.

OSA at UTHSC
Each month for the past year, Steve Olmos, assistant professor in Restorative Dentistry and founder of the TMJ & Sleep Therapy Centre International of California, has been traveling to Memphis to treat patients with obstructive sleep apnea (OSA). This practice will become the foundation for the planned clinic which will provide non-surgical treatment options for both adults and children who suffer from this condition.

Dr. Olmos has offered mini-residencies in the topic at UTHSC through the College of Dentistry Office of Continuing Education and was a key presenter at the Meeting of the Minds program.

Dr. Olmos is shown above presenting a pediatric sleep apnea case to medical colleagues from Le Bonheur.

Dentistry

Terry Propper, DDS ’82, was surprised by the Benco Family Foundation with a gift in her honor to support the special needs dental clinic that will be a part of the new dentistry annex. The presentation was made in front of the more than 800 in attendance at the 2016 Benco Sales Forum held in March. During the week of March 7-11, the College of Dentistry celebrated National Dental Assistants Week. Shown above are dental assistants who work in the college’s dental clinics.

The University of Tennessee Health Science Center
Congratulations  
2015-2016 Faculty Enrichment Awards

Dean Tim Hottel presented the following faculty awards at the college’s Bowyer Lecture in February 2016. These awards are funded annually through enrichment endowments established by alumni and friends of the UTHSC College of Dentistry. Thanks to our donors who have made these awards possible and congratulations to our recipients.

Bowyer Clinical Sciences Faculty Enrichment Award
Jay Ragain, DDS, MS, PhD (Restorative Dentistry)

Bowyer Basic Sciences Faculty Enrichment Award
Randall Nelson, PhD (Anatomy and Neurobiology)

John S. Diggs Nelson Faculty Enrichment Award
Gary Rollins, DDS (General Practice, Restorative Dentistry)

Darton Taylor, DDS (General Practice, Restorative Dentistry)

Scott Hollis, DDS, MDS (Prosthodontic)

Marty Green, DDS, MS (Periodontology)

College of Dentistry Junior Faculty Enrichment Award
Mohammed Chatiri, DDS (Periodontology)

Vickie Jones, RDH, BS (Periodontology)

College of Dentistry Dean’s Appreciation Award
Ashtani Braxton, DDS (Restorative Dentistry)

Mustafa Dabbous, MS, PhD (Bioscience Research)

Antheus Verhui, PhD (Bioscience Research)

Mark Scarbecz, PhD (Institutional Affairs)

Yanhu Zhang, PhD (Bioscience Research)

Melissa Marchesan, DDS, MS, PhD (Endodontics)

David Redmond, DDS (Restorative Dentistry)

Larry Dormoos, DDS, MS (Pediatric Dentistry and Community Oral Health)

Mary Jefferson (Bioscience Research)

Kirby and Pat Walker Faculty Enrichment Award
Jim Simon, DDS, ME (Restorative Dentistry)

Wimman Faculty Fellowship Award
Jeffery Brooks, DMD (Oral & Maxillofacial Surgery)

Anastasios Karydis, DDS, DS, MS (Periodontics)

Jack Seeberg, DMD (Clinical Affairs)

William Noyes, DDS, PA (General Practice, Restorative Dentistry)

Distinguished Faculty Award
Barry Owens, DDS (Restorative Dentistry)

The numbers are in for the 2015-16 UTHSC College of Dentistry Oral Health Outreach Initiative, and they reflect the combined efforts of Tennessee Smiles: UT Grassroots Oral Health Outreach Initiative and Urban Smiles, an initiative of the Department of Dental Hygiene and Graduate Periodontics. Altogether, the college took part in 47 community engagement efforts that reached across social and cultural borders in providing care. These included Memphis Interfaith Agency (MIFA) screenings for employees, “It’s a Family Affair,” the Westside Middle Ultimate Block Party, the Teen Appeal Camp and the Diabetes Health Fair, along with numerous back-to-school and community support events.

When teams of volunteers were not able to attend an event and dental products were available, dental items were given to a representative from the sponsoring organization for distribution. The dental oral health care products consisted of toothbrushes, toothpaste, floss, Poligrip denture adhesive, and mouth rinses when available. Dental and medical health care information was also provided during the events.

Student Government Association Executive Council Awards

A total of 12 UTHSC faculty members were honored with one of the most prestigious awards that can be given from students to a faculty member, the SGAE Council Awards. The SGAE Council Awards Banquet held at the Student Alumni Center on May 3. The annual awards recognize two faculty members from each college, with the award presented by each college’s SGAE 2015-2016 SGAE Awards Banquet held at the Student Alumni Center on May 3. The annual awards recognize two faculty members from each college, with the award presented by each college’s SGAE representative. Requests for nominations go out during the spring with students nominating faculty they believe meet the following criteria — demonstration of outstanding teaching ability, presentation of materials in a way that sparks interest and independent thought, effective organization and communication of the subject, responsiveness to students inside and outside of classrooms, and genuine concern for students’ learning.

Vickie Jones, RDH, instructor in the department of Periodontology in the College of Dentistry; James C. Ragain, DDS, PhD, associate professor in the department of Restorative Dentistry were chosen to receive the award. The awards were presented by College of Dentistry SGA President John “Pug” Pate.

Later that evening, the Imhotep Society inducted new members. The Imhotep Society is an invitational organization established by the UTHSC SGAE to recognize students who have shown dedication in service, leadership and student life. At the time the society was established, the SGAE’s members recognized that students sacrificed high academic achievement and may not necessarily receive recognition through organizations that traditionally recognize academic and clinical performance. The SGAE wanted to honor these student leaders and volunteers in a way that gave appreciation and encouragement in leadership and volunteerism as students and alumni and founded the society. They chose to name it after Imhotep, Egyptian god of medicine.

Each college SGA has its own classification and point system for nomination into the society. This year’s College of Dentistry inductees are:

Morgan E. Brousard
Sara Lynn Babanok
Hallie Boudrot
Christian Caim
Jonathan F. Carrera
Maira Paola Castano
Brent T. Danley
Jordan Elizabeth Dunn
Anna Claire Eaton
Charly Nicole Edwards
Samantha Ellis
Taylor Elaine Enochs
Michael Fesmire
Jill Emily Gibson
Kellia Graham
Holly Green
Hannah Hanson
Kristen Suzanne Hayes
Anita Elizabeth Hill-Moses
Sam Hunter
Thomas D. Jenkins
Wes Joseph Johnson
Xandria L. Johnson
Gary Jones

William Noyes, DDS, was one of three recipients of the UT Alumni Association Outstanding Teacher Award. Dr. Noyes is an assistant professor in the UTHSC College of Dentistry and acting chair of the Department of General Dentistry.

In 2002, he and his wife, Nancy, founded the Noyes Brain Tumor Foundation, after their oldest son, Matthew, was diagnosed with a malignant brain tumor. The diagnosis led to the first of many trips to Memphis for Matthew’s treatment at St. Jude Children’s Research Hospital. The foundation has raised more than $1 million for brain tumor treatment and research at St. Jude, chiefly by means of an annual fund raising dinner and auction, Dr. Noyes said. The foundation also helps children attend Camp Sunshine, a camp for children with life-threatening illnesses, in Casco, Maine.

In 2013, after his wife became the first bereavement coordinator at St. Jude, Dr. Noyes sold his practice in Maine and moved to Memphis. He began his career at UTHSC as a clinical group leader, and has served in the Faculty Senate and numerous other College of Dentistry committees. In January 2016, he was named the acting chair of the Department of General Dentistry.

“I didn’t expect it at all,” Dr. Noyes said of the award. “I’m very appreciative.”

The University of Tennessee Health Science Center
Graduation was a great event for the College of Dentistry students and their families. The graduates celebrated their unique moments during this year’s ceremony. Not included in the listing below, but participating, was Palmer Louise Seelinger, the daughter of Chelsea and Payton Seelinger. Considered an honorary member of the graduating class, she was born during her parents’ Dental Day. She was carried across stage by her father while her mother, who had just received her hood, watched.

Other family highlights included Assistant Professor Anne Hill stepping up and hoisting her son, Tristan. The year of pride showed from Tennessee Dentistry Association President and graduation speaker Rick Guthrie as his son, Frederick Vanhus Guthrie, received his diploma.

On Friday, May 20, 122 students received their degrees from the College of Dentistry at a ceremony held at the Cook Conference Center in Memphis. After Dean Timothy Hottel presented the candidates for graduation, UTHSC Chancellor Steve Schwab conferred the degrees.

Rick Guthrie, DDS ’87, president of the Tennessee Dental Association, presented the alumni pledge to the class of 2016. He spoke about his personal interaction with the dental students who participated in the first Bristol clinical rotation. His remarks to the class focused on the importance of continuing the strong bonds and connections forged in dental school with fellow students and clinical instructors.

Frank Stockdale Carney, JD, who is a member of the dentistry class of 2019, not only served as organist for the ceremony, but also sang the national anthem.

The University of Tennessee Health Science Center
In what has become one of the highlights in the dental education course of study, proud parents and friends gathered on July 15 in the Cannon Center for the Performing Arts in Memphis to watch the 89 members of the Class of 2018 take part in the College of Dentistry Commencement to Clinical Practice, or as commonly called, the White Coat Ceremony. Held at the beginning of the D3 year, students receive their white coats, clinical business cards and professionalism certificates. They also take the Oath of Ethical Practice.

This year, Jeannie Beauchamp DDS ’91, secretary of the Tennessee Dental Association and past president of the UT Alumni Association was the keynote speaker. The event was sponsored by the American College of Dentists, the International College of Dentists and the UT College of Dentistry Alumni Association.

Members of the Class of 2018

- Sarah Atkins
- Kathryn Beal
- Bryan Benbow
- Charly Bird
- Dana Bodenner
- Brian Brookline
- Jennifer Brown
- Brooklin Byrd
- Christian Cain
- Amy Campbell
- Jarod Campbell
- Samuel Cason
- Christopher Chandler

    - Women: 42%
    - Men: 58%
    - First generation college: 10
    - Armed forces veteran: 1

Getting started

During orientation week, D1 students attend an ASDA informational meeting.
Why is anaplastology a part of the College of Dentistry?

With the start of World War II, European sources for the glass used to make artificial glass eyes were no longer available. Because many injured U.S. soldiers returning from war needed artificial eyes, the U.S. government began a search for new materials to use in producing them. Medical grade plastics were being used in the dental field, and the Department of the Navy successfully applied this material to the production of artificial eyes.

Now, most artificial eyes are made of acrylic. Other extraoral prosthetics, such as ears and noses, are made of pliable, paintable silicone. Throughout the years, the materials and how prosthetics attach to the body have improved. Singer has helped advance the field with the invention of 3rd Degree, a technically advanced silicone molding compound and Dermaflage, a topical dermal filler.

Anaplastology is a clinical profession that provides reconstructive and custom prostheses to restore the normal appearance of patients who have malformed, disfigured or missing parts of the face. Here, art and science must combine to produce lifelike eyes, noses and ears that are functional, comfortable and, most importantly, believable. The goal is that the prosthesis is undetected when worn. Within the College of Dentistry, Anaplastology is a specialty service housed in the Department of Prosthodontics and provides training for residents who hope to work in this field.

And through this service, anaplastologist Maddie Singer, creates remarkably realistic prosthetics that are astounding to behold. Singer said people are surprised at how realistic her work looks. “I think about how many variables are required to have a nose seamlessly fit on your face. It’s the center of focus.” It takes considerable skill to hide the edges so they blend in naturally. “And if you look at the paint jobs you’ll notice mottling, a spatter technique,” she said. “I’ll use toothbrushes or airbrushes to make it look real. I’ll purposely put in a dark spot to make it imperfect, so it looks more real.” When I do an orbital, I hand-punch each hair in and will even do eye makeup, like an eyeliner, and add freckles and veins. That really brings it to life.

Singer’s intricate work is an evolution from her days in Hollywood, when her work involved turning actors into monsters and space aliens. Her creative background working on “The X-Files” and “Buffy the Vampire Slayer,” among numerous other television and film productions, opened the way for her to become a prosthetics innovator and inventor. In 2003, she started working in the College of Dentistry’s postgraduate program in prosthodontics.

Her view of the prosthesis is that it is a totem. “It represents what they think they need in order to feel whole again,” she said. “I’m taking the power away.”

About the process

Taking a careful assessment of the patient when he or she comes in for the initial appointment is a critical first step. Singer said that the candidate for a prosthesis must be able to take care of it, have the dexterity to put it on, and be responsible in coming to appointments.

Making impressions that are used in producing the prosthesis is the next step. In this patient’s case, impressions of both the remaining ear and the defect site were done. A wax sculpture with a dental base plate wax was then made. After this, the mold is packed with silicone.

The unfinished, unpainted silicone model is compared to the existing ear, and the final sculpting and finishing is done. “I’m pretty fast when it comes to sculpting. I take a color sample of the patient’s base skin tone and then I’ll finish the sculpture, make molds and cast the silicone. The patient comes in and I make sure it fits right and retention is going to work. When it’s correct, I paint it with the patient present.”

Finally, Singer teaches the patient how to wear the prosthesis and that can be a challenge. “It’s sometimes difficult for them to have dexterity needed to place the prosthesis, and I have follow ups to make sure they’re using it correctly. I also tell people to keep out of the sun, not only for their health, but because skin changes,” said Singer.
Every day, patients visited the studio in the College of Dentistry, and Singer always ensured they had a positive experience. "They were welcoming and kind, and I loved the energy," she said.

Singer incorporated her artistic skills into her work, ensuring that the prostheses were not only functional but also aesthetically pleasing. "I wanted patients to feel proud of their new prosthesis," she said.

Her work was featured in several exhibitions around the world, including the San Francisco Art Institute and the New York University Tisch School of the Arts. "I was thrilled to be part of these prestigious institutions," she said.

Singer's talents as a sculptor and prosthetist have been in demand for years. "I have had the opportunity to work with many talented individuals," she said.

In her spare time, Singer enjoys painting and sculpting in her studio. "I love the process of creating something new," she said.

Singer's dedication to her craft has earned her recognition and praise. "I have been fortunate to work with many talented individuals," she said. "It has been an honor to be part of this team and to contribute to the field of prosthodontics."
Consequences
Caring for patients with hemophilia

By Erin Figg

For most people, having a cavity filled, or even just an annual dental exam, is a typical procedure which, at most, can be uncomfortable. However, for a patient with hemophilia – a rare bleeding disorder that prevents the blood from clotting normally – a trip to the dentist could have far more serious consequences.

“Anything that has to do with oral infection, tooth extraction or even filling a cavity is a much bigger issue for a hemophiliac than it would be for someone without hemophilia,” said College of Dentistry Dean Tim Hottel. “People like you and me usually heal up after a dentist appointment before we get home, but for someone with a blood disorder, that’s not the case.”

With the goal of providing safe and extensive oral health care for hemophilia patients, the College of Dentistry soon will offer dental services at UTHSC’s Hematology Clinic that opened in March and has further expansions in the works.

“At the Hematology Clinic, we provide comprehensive care to patients with bleeding and thrombotic disorders and other rare blood disorders. We have skill sets, an onsite lab and infusion services to diagnose, manage and treat these disorders, including hemophilia,” said Dr. Sandeep Rajan, medical director for the clinic. “Our clinic is built to provide holistic care, hence we are expanding to include primary care, physical therapy, dentistry and rheumatology and other consultative services to patients with such disorders.”

Dean Hottel said architectural plans for the clinic’s dental offices are underway and services are expected to be in full swing by early next year.

“Most likely when we resume classes in January, we’ll be sending a senior dental resident – either a periodontal resident or an Advanced Education in General Dentistry (AEDG) resident – who is trained in more complicated medical cases, along with a senior dental student,” he said. “That way, there’s also an educational component, and our students will graduate with at least some practical knowledge of how to manage a patient with clotting disorder. And there are a lot of those patients out there.”

Dean Hottel continued by saying that he’s not aware of any other dental school in the country with a focus on treating patients with blood disorders. As a result, many dentists have limited options in such circumstances.

“Most general dentists will either call the patient’s physician to adjust certain medications in advance, which will hopefully allow them to clot,” Dean Hottel said. “Or sometimes they’ll just say, ‘I can’t treat you and send that patient to the emergency room, where they can’t do much except extract teeth.’

According to Dean Hottel, the dentistry practice at the UTHSC Hematology Clinic should change that scenario, at least in this region. The clinic’s dental students will be able to work hand-in-hand with hematologists and other blood disorder specialists to address each patient’s individual needs.

“Not only will it allow the on-staff resident and students to treat patients in a clinic with a full medical staff next door if something goes wrong, but it also will enable them to do much more than just extractions, such as regular cleanings and fillings,” Dean Hottel said. “The end goal is to give our patients comprehensive care, not just for their disease, but also so they can maintain their teeth and function in society. For example, if you want to go out and get a job, it can be difficult to do when you’re missing your front teeth.”

Dean Hottel said the dental clinic initially will operate two days a week with a staff of two and equipped with one dental chair. He estimates they’ll be seeing a minimum of 150 patients who are already receiving other types of care at the hematology clinic, but he expects this number to increase.

According to the Centers for Disease Control and Prevention, approximately 20,000 people in the United States are living with hemophilia. For this reason, Dean Hottel hopes the work the College of Dentistry students will be doing at UT Hematology Clinic will ultimately have far-reaching effects.

“The long-term goal is to develop a protocol that could be disseminated to all dental schools and possibly integrated into their curriculums,” he said. “Let’s say we treat 300 patients next year, then we anticipate that we’re going to have about 1,500 patient visits a year for these folks. With the practical knowledge we gain, we should be able to develop some type of a protocol that could hopefully be published everywhere.”

The dentistry hemophilia clinic has been funded by a grant from Delta Dental.

FACTS ABOUT HEMOPHILIA

- Hemophilia is usually an inherited bleeding disorder, caused by gene mutation, that prevents the blood from clotting properly, resulting in spontaneous bleeding and excessive bleeding after injuries or surgery.
- Hemophilia affects one in 5,000 males. Females also can have hemophilia, although these cases are rare.
- Currently about 20,000 American males are living with hemophilia. About 400 babies are born with hemophilia each year in the United States.
- In about two-thirds of hemophilia cases, there is a family history of hemophilia.
- Hemophilia can cause bleeding in the joints that can lead to chronic joint pain or joint disease; bleeding in the head or brain, which can cause seizures or paralysis; and fatalities if bleeding can’t be stopped or occurs in vital organs.
- About 70 percent of Americans with hemophilia receive comprehensive, multidisciplinary care in hemophilia treatment centers (HTCs).
- Mortality and hospitalization rates for hemophilia-related bleeding complications were 40 percent lower among people who received care in HTCs than among those who did not receive this care.

20,000 people in the United States are living with hemophilia.
On Thursday, Feb. 26, at 7:30 p.m., Brian received his wristband and became the first person in line outside the east entrance doors of Bellevue Baptist Church. The line grew behind him until it stretched around the building as people, young and old, many wrapped in blankets to keep warm, gathered in hopes that they would be admitted to the Mid-South Mission of Mercy (MidMOM) and receive free dental care being offered.

This free dental clinic was sponsored by the Memphis Dental Society for underserved people living in Memphis and the surrounding Mid-South area. For two days, Feb. 27 and 28, MidMOM was the largest temporary dental clinic in the world and provided dental care to 2,131 Mid-Southerners, many of whom were from working families who do not have access to dental care or cannot afford dental insurance.

While other Mission of Mercy events have been held throughout the U.S. since the initial one was held in Virginia in 2000, this was the first for the Memphis area. All services were provided free of charge by members of the Tennessee, Mississippi and Arkansas Dental Associations who were assisted by a host of volunteers. The idea of holding MidMOM began almost two years ago as Mitch Godat, DDS ’97 was preparing to serve as president of the Memphis Dental Society. “I wanted to help serve a greater purpose,” Dr. Godat said. Soon after, he, Scott Edwards, DDS ’82, and Greg Kemp, DDS ’91, along with several other members of the Memphis Dental Society, began working with Chuck Woods, DDS ’81, an Arkansas dentist. Dr. Woods had been involved with the Arkansas Mission of Mercy and is a board member of the America’s Dentists Care Foundation, the organization that provides equipment, instruments and guidance for Mission of Mercy clinics.

Monthly planning meetings began in September of 2014. Recruiting the huge number of volunteers needed to staff and manage such an event began in October 2015. Altogether, more than 1,900 dentists, dental hygienists, physicians, nurses, interpreters, pharmacists and general volunteers took part. This number included a multitude of College of Dentistry dental and dental hygiene students and faculty members.

Finding an easily accessible site that could accommodate the parking, staging, waiting, triage, treatment, food preparation (meals were served to patients and volunteers) and laboratory needs was a second major challenge. Bellevue Baptist Church, located just off I-40, rose to the occasion and provided its campus, along with generous support. On the two days of MidMOM, the doors opened at 6 a.m. to admit hopeful patients who had formed the long lines that had grown overnight. Upon entering, patients first registered. Next, they passed through medical and dental triage stations that included X-rays and other imaging. Afterwards, they were seen for dental treatment. Long rows of dental chairs filled two gymnasiums where teeth were cleaned, extracted, repaired and filled. Impressions were taken, then partials were created in a temporary lab housed in the Bellevue kitchen. Prescriptions were written and filled at the on-site pharmacy.

To keep children occupied during the wait times, a special activity area was set up and hosted by the Tooth Fairy. Throughout the two days, the Bellevue orchestra and other area musical groups played on site.

Written by Jane Pate, MA
Managing the volunteers, the patients, the equipment, the instruments and the treatments was a logistical wonder. Upon arrival, volunteers received T-shirts that were color coded to show the type of service they were providing. Patients were escorted to and from different service areas. Colored cards held up by care providers signaled when the next patient could be seen.

The view from the track located above the gym showed how many people needed help, how many people were helping and the organizational intricacies involved in coordinating the caregiving.

To provide these services, MidMOM received donations from 15 major groups. Fundraising to pay for the rental of the portable dental clinic equipment and instruments was key to the success of the project. For Dr. Godat, this was nerve wrecking as two weeks before the event, the funding goal had not been met. When faced with whether to call off or hold the event, he “decided to go on faith that the money would come.” And the final bit of funding did come in the following week.

While the event was a huge success by all measures, it showed the great, ongoing need for dental care of the under served in our region.

Plans are now in the works for next year’s MidMOM, and it is scheduled for Feb. 10-11, 2017. Updates are being posted on the event’s Facebook page, https://www.facebook.com/MidSouthMOM. The website is http://www.midsouthmissionofmercy.org/.

A student dentist finishes with a patient
Research Day 2016

Dr. John O. Burgess, professor and director of the Division of Biomaterials and assistant dean for Clinical Research at the University of Alabama at Birmingham was the featured speaker at the 2016 Student Research Day and Table Clinic Competition was held on Feb. 16. His presentation, “Current Trends in Ceramics and Composites,” highlighted newly developed dental materials and the laboratory and clinical evidence-based analysis of the best methods to utilize these materials in dental practice.

Altogether 22 students and four residents presented results of their studies in 25 posters and table clinics. Brooklin Byrd, D2, was selected as winner of the Student Clinician Award for the most outstanding clinical presentation. Her project was titled “Light Flux and Color Differences between Ceramic Dental Materials.” She was assisted by Brian Morrow and Dr. Constance West, Dr. García-Godoy and Dean Timothy L. Hotel. The award was sponsored by the Dentply Corporation and was presented by Dr. García-Godoy and Leslie du Plooy, representing Dentply. In October, Byrd will represent UT at the student poster competition of the American Dental Association Annual Session being held in Denver, Colorado.

Thomas A. Jones received the Harold Cloglom Award. Brooklin Byrd, Simon Chanzin, Angela Frantz and Shelly Garret were named winners of American Association for Dental Research (AADR) Memphis Section Awards for Student Research while Nicole Hennis, Daniel Stegall, Lei Q. Ta, and Lydia Watson were winners of James C. Ragan Jr. Awards for Excellence in Student Research. Student dentists Brooklin Byrd, Simon Chanzin, Angela Frantz, Daniel Stegall, and Lei Q. Ta will present their projects at the March 2016 AADR national meeting.

Dr. Vahe Nakashyan received the Stacy A. Garner Graduate Program Research Award, sponsored by the Tennessee Dental Association Foundation, for his presentation, “Vitamin D Attenuation of Inflammatory Cytokine Production by Gingival Fibroblasts.” He was assisted in his research by Drs. David Tipton and Sidney Stein.

The Summer Student Research Training Program and Dr. Nakashyan’s Master’s thesis research were supported by grants from the UT Health Science Center College of Dentistry Alumni Endowment Fund and the Tennessee Dental Association Foundation. Faculty member and alumnus Dr. John C. Ragan, Jr., presented a plaque for his outstanding support of student research.

TDA Foundation supports Summer Student Research

The Tennessee Dental Association Foundation (TDAF) has a wonderful history of supporting the College of Dentistry, particularly student research. At the TDA’s Music City Dental Conference held in May, new TDAF President Robert Hopper, DDS, along with TDAF President Emeritus Steve Sauer and board member Dr. Bill Powell, presented a check for $10,000 to Dr. Franklin García-Godoy, senior executive associate dean for research, for the college’s summer student research program.

“During my time as TDAF president, student research at the College of Dentistry has been a major priority,” explains Dr. Sauer. “Dr. Hopper has made it clear that he wants to continue to support this research as it is vital to the dental profession, and we want to help educate and equip the next generation of researchers.”

The TDAF funding provides stipends for dental students involved in summer research projects. Students who participate in the program presented their findings at the UT student research day. In addition, selected students will make oral presentations and submit posters during the Hinman Student Research Symposium in October. These students are also asked to submit an abstract and poster to the AADR.

“We are extremely grateful to the TDA Foundation for their generosity to our dental student research program,” explains Dr. García-Godoy. “Their continued generosity is very important to the college as more and more dental students become involved in research.”

TDAF grants
to College of Dentistry Alumni Association

“Without that initial research grant from the College of Dentistry Alumni Association, this project would have never gotten started.”

Dr. Mojen Dehghan

TDAF has provided grants for research in the Dental School’s Division of Biomaterials and professor and director of the Transformation Center; Janet Harrison; Anthony Versluis; Yunhui Zheng; Elizabeth Tolley along with Colette Stewart; and the tireless efforts of the AAWD volunteer students. “Through the help of Dr. Daraneel Versluis, who has the scientific knowledge and research expertise, the generous grant from the Alumni Association, and the support of Dean Hotell and Dr. García-Godoy this project came to life,” she said.

The goal of the research team is to continue the phase 2 of the clinical study in the Fall of 2016 and to conduct in-vitro studies on effectiveness of anti-erosive tooth pastes currently available. On the next two pages, follow Dr. Dehghan’s journey and see just how the initial investments in her research have produced many unexpected outcomes.

Research

TRENDING

Dental erosion is a multifactorial condition with biological, chemical, psychological and behavioral factors that effect the rate of dental erosion in an individual.” That is why early detection of the pattern of erosion by dentists and dental hygienist can be instrumental in minimizing the extent of erosion in these patients. Unfortunately, because of the negative stigma and secrecy surrounding bulimia, many patients are reluctant to disclose their condition with their dental care providers. Also, many dentists are uncomfortable in asking their patients questions regarding their condition. As a result, a large number of these patient are underdiagnosed and undertreated. She was also frustrated that there was no concrete and coherent treatment protocol for treating this patient population.

This motivated her to find a way to better care for her patients. She wondered: What are the common agents? What makes this happen faster in some and not others? Are there products my patients could use to prevent this? These questions became the bases of her research. In the quest to find answers to her research questions, Dr. Dehghan, with the guidance and assistance of the College of Dentistry administration, assembled a multidisciplinary, multi-institutional group of experts including practicing dentists, biomaterial scientists, a salivary research biologist, a clinical psychologist, a biostatistician, and an epidemiologist. This group of researchers and clinicians includes Drs. Franklin García-Godoy; Nancy Johnson, clinical director of the Transformation Center; Janet Harrison; Anthony Versluis; Yunhui Zheng; Elizabeth Tolley along with Colette Stewart; and the tireless efforts of the AAWD volunteer students. “Through the help of Dr. Daraneel Versluis, who has the scientific knowledge and research expertise, the generous grant from the Alumni Association, and the support of Dean Hotell and Dr. García-Godoy this project came to life,” she said.

The goal of the research team is to continue the phase 2 of the clinical study in the Fall of 2016 and to conduct in-vitro studies on effectiveness of anti-erosive tooth pastes currently available. On the next two pages, follow Dr. Dehghan’s journey and see just how the initial investments in her research have produced many unexpected outcomes.

Dr. Robert Hopper (far left), Dr. Steve Sauer (second from left), and Dr. Bill Powell (far right), present a $10,000 check for student research to Dr. Franklin García-Godoy (second from right).

Dr. Mojen Dehghan

Shown from left to right are Drs. James C. Ragan, Jr., Dr. Franklin García-Godoy, Daniel Stegall, Thomas Jones and Simon Chanzin, Angela Frantz, Nicole Hennis, Dr. Vahe Nakashyan, Lei Q. Ta, Shelly Garret, Lydia Watson, Brooklin Byrd, Leslie Du Plooy, and Dr. Mustafe Dabbous.

According to the National Eating Disorders Association More than 30,900,000 Americans suffers with eating disorders.

Dehghan in her first year of practice

Treating this first case led to more referrals, and soon Dr. Dehghan was treating more and more patients with bulimia. In caring for this patient population, she noticed that some patients who had engaged in purging for only a short time had their teeth enamel completely washed off by gastric acid while others who had suffered far longer presented with less destruction. She also learned that this same type of dental erosion is seen in patients suffering from acid reflux, pregnant women with morning sickness, and cancer patients receiving chemotherapy. According to Dr. Dehghan “Dental erosion is a multifactorial condition with biological, chemical, psychological and behavioral factors that effect the rate of dental erosion in an individual.” That is why early detection of the pattern of erosion by dentists and dental hygienist can be instrumental in minimizing the extent of erosion in these patients. Unfortunately, because of the negative stigma and secrecy surrounding bulimia, many patients are reluctant to disclose their condition with their dental care providers. Also, many dentists are uncomfortable in asking their patients questions regarding their condition. As a result, a large number of these patient are underdiagnosed and undertreated. She was also frustrated that there was no concrete and coherent treatment protocol for treating this patient population.

This motivated her to find a way to better care for her patients. She wondered: What are the common agents? What makes this happen faster in some and not others? Are there products my patients could use to prevent this? These questions became the bases of her research. In the quest to find answers to her research questions, Dr. Dehghan, with the guidance and assistance of the College of Dentistry administration, assembled a multidisciplinary, multi-institutional group of experts including practicing dentists, biomaterial scientists, a salivary research biologist, a clinical psychologist, a biostatistician, and an epidemiologist. This group of researchers and clinicians includes Drs. Franklin García-Godoy; Nancy Johnson, clinical director of the Transformation Center; Janet Harrison; Anthony Versluis; Yunhui Zheng; Elizabeth Tolley along with Colette Stewart; and the tireless efforts of the AAWD volunteer students. “Through the help of Dr. Daraneel Versluis, who has the scientific knowledge and research expertise, the generous grant from the Alumni Association, and the support of Dean Hotell and Dr. García-Godoy this project came to life,” she said.

The goal of the research team is to continue the phase 2 of the clinical study in the Fall of 2016 and to conduct in-vitro studies on effectiveness of anti-erosive tooth pastes currently available. On the next two pages, follow Dr. Dehghan’s journey and see just how the initial investments in her research have produced many unexpected outcomes.

Dr. Dehghan hopes that her study, and other similar studies, will serve to bring awareness to the damaging effects of tooth erosion and improve the quality of life for this under diagnosed and undertreated population. Dentists and dental hygienists can play an important role in early detection of acid erosion and referring these patients to the appropriate health care providers.”

At right, The mouth of 27-year-old patient who was receiving treatment for bulimia.
Dr. Dehghan is invited to speak at colleges and meetings across the country.

This new research brings awareness of the impact of eating disorders on dental erosions and pushes forward identification, treatment and prevention protocols for the dental profession.

The UT Research Foundation provides funding to assist in obtaining a patent for the product.

A provisional patent is awarded.

Product development continues.

The research results “Investigating enamel loss when brushing with an anti-erosive toothpaste after an acidic episode will be published in the Journal of General Dentistry, 2016.”

A second UT College of Dentistry Alumni Association research grant is awarded to fund “Investigation of Different Mouth Washes to Improve Oral pH.”

Clinical psychologists, psychiatrists and nutritionists work with the dental research team and exchange information to develop a holistic treatment protocol.

A multidisciplinary group of researchers and clinicians that includes Drs. Franklin Garcia-Godoy, Janet Harrison, Anthony Verslluis and Yunhui Zang, along with Colette Steward and AAWD student volunteers, is formed to work with the project.

A collaboration is established at The Transformation Center in Cordova, Tennessee. A mobile dental unit is set up on site to test the product and collect data.

Using outcomes from the in vitro studies, an oral hygiene protocol for bulimic patients who relapse is developed.

A provisional patent is awarded.

Product development continues.

Thank You for Your Membership in the 1911 Society

The UT Health Science Center Office of Development and Alumni Affairs is pleased to record a successful year for the 1911 Society. The society recognizes annual supporters of the College of Dentistry, who are critical to our mission of educating some of the best minds, conducting innovative research, and improving health. The listing is available through the 1911 Society Members link at uthscalumni.com/1911.

The gifts we receive go a long way toward helping our students, faculty, programs, and facilities. To each of you who has given, thank you,” said Randy Farmer, vice chancellor for Development and Alumni Affairs.

“From recent graduates to alumni, friends, faculty, and staff, we are honored to extend 1911 Society membership to our annual donors,” Farmer added. Named for the year of the Health Science Center’s founding, the 1911 Society recognizes and celebrates total giving by donors who make their gifts between July 1 and June 30 each year.

Membership levels are based on total contributions during the year to any college, program, or fund at UTHSC. Gifts can be renewed annually to retain membership.

“Private donors to our campus are the leaders of our past, present and future,” Farmer said. “Members of the 1911 Society demonstrate an extraordinary level of interest, involvement, and dedication through their generous financial support.”

Your loyalty matters to us, to our students, and to you. For more information on how to make a gift and become a member of the 1911 Society, please contact the Office of Development and Alumni Affairs at (901) 448-5516 or visit online at uthscalumni.com/1911.

---

UTHSC honors its loyal donors who make gifts of at least $100 every year. In the College of Dentistry, these gifts are used to support student recruitment, for the enrichment of our students, to provide faculty development that will enhance knowledge and skills, and to purchase equipment that keeps our labs and classrooms on the cutting edge. Did you know...

- Tuition covers only about 48 percent of the cost to educate a student.
- UTHSC COD annually awards more than $22.7 million in scholarships and financial aid.
- 89 percent of students receive some form of financial assistance.

Join the 1911 Society today to support our growth and provide greater opportunities for our students.

As the UTHSC College of Dentistry continues to expand across the state, so does the travel required for dentistry students on clinical rotations. To participate in the two-week rotations at Healing Hands Health Center in Bristol, Tennessee, students must drive almost eight hours from Memphis to the eight-room dental clinic. To take part in the newly established Chattanooga clinic, they must drive nearly five hours. Thanks to a recent donation of two Nissan Rogue crossover vehicles from Delta Dental of Tennessee, students can now carpool together when traveling back and forth to these clinical sites.

The donation came about when UTHSC alumnus Rick Guthrie, DDS '87, and instructor at the Healing Hands Health Center, was approached by a dentistry student about possibly donating gas gift cards to the students who were participating in the two-week clinical rotations. Philip Wenk, DDS ’77, CEO and president of Delta Dental of Tennessee, heard about the request and decided there must be more they could do to assist.

“After we helped establish the student externships with Healing Hands, we became aware that transportation could sometimes be an issue for the student doctors traveling to and from the clinic in upper East Tennessee,” said Dr. Wenk. “We wanted to make sure there was always reliable transportation available to them to get to Bristol, as well as to get around the area once they are there. Nissan is a great client of ours, and we were delighted to provide the two new Rogues for the students. We wanted to ensure the sustainability of the externship program so that the patients at Healing Hands would have greater access to dental care and so that the dental students continue to have this tremendous learning opportunity.”

The new cars, which can fit up to four dentistry students, are driven to Bristol by the students and stay there until the students are done with their rotations. One car stays at UTHSC until the first group returns, and the next group leaves. This allows students on rotations at the Bristol clinic to always have access to one of the cars. They became available for use mid-spring of this year.
The College of Dentistry held its 15th Annual Scholarship Banquet at the Memphis Hilton on March 5, 2016. The banquet is sponsored each year by Delta Dental of Tennessee.

Thanks to our generous alumni and friends, the college presented 105 awards totaling more than $240,000. UTHSC COD now has 41 scholarship endowments that provide annual awards, and several more that are in the funding process. In addition, a number of organizations make annual awards to dental students.

“The Scholarship Banquet provides us with a wonderful setting in which to recognize and reward our outstanding students, while honoring the donors who have made these scholarships possible,” explains Dean Tim Hottel. “As the cost of dental education continues to rise, scholarships are more important now than ever before. And we are so fortunate to have Delta Dental of Tennessee sponsor this event. Obviously, we could not do it without them.”

Endowed scholarships help deserving students and create lasting legacies. They can be funded through a gift or pledge of $25,000 or more and may be named in honor or memory of an individual, family or organization. The principal of the endowment is invested and never touched, or organization. The principal of the endowment is invested and never touched.

Thanks to all our dedicated supporters!

To learn more about this and other scholarships offered by the UTAA, visit utaaconnect.com/scholarships.

*This scholarship is a surprise and a blessing. Any money I receive goes a long way towards reducing the amount of debt I may have when I graduate,” said Forrest Driver, a first-year student at UTHSC COD and recipient of this year’s Legacy Scholarship. Driver’s father, Jerry, attended UTHSC and graduated from the College of Dentistry in 1982.

As a biochemistry major at the University of Tennessee, Knoxville, Driver knew he wanted a career in the health sciences and considered studying medicine. “I shadowed several doctors and did not like it as much as I thought I would. My dad arranged several shadow opportunities with dental colleagues, and that I really enjoyed.”

What excites Driver most about the field of dentistry? “It is definitely the technology. Going forward it is going to play a big role in our practice of dentistry. But I also like the business aspect of running a practice.”

“I would. My dad arranged several shadow opportunities with dental colleagues, and that I really enjoyed.”

The mission of the William F. Slagle Dental Meeting is to advance the delivery of quality dental care by providing dental teams with a premier educational opportunity. In accordance with this mission, the Slagle Dental Meeting is committed to offering extensive continuing education courses, commercial exhibits, and additional educational programs that advance the growth and development of the dental profession.

The Slagle Dental Meeting is sponsored by the UT College of Dentistry Alumni Association. All profits from the Slagle Dental Meeting are used to support dental education programs at the University of Tennessee.

Look for more information in the coming weeks about the 2017 Slagle Dental Meeting being held March 3 – 5, 2017. Please see page 45 for photos and a summary of the 2016 meeting.  

Drs. Wenk and Towner named Outstanding Alumni

The University of Tennessee Health Science Center

Dr. Philip Wenk

Even as a student, Dr. Wenk showed an interest in leadership by serving as vice president and president of the UT Student Association and as a member of the Student Government Association Executive Council.

After his graduation from the College of Dentistry, Dr. Wenk transitioned from a well-honored student leader to small-town dentist practicing in Clinton, Tennessee.

His community involvement there included civic organizations, local government and athletics. These roles provided the perfect training grounds for his current position, where he places strong emphasis on corporate citizenship.

Dr. Wenk served in private practice until 1997, when he accepted the role of chief operating officer at Delta Dental of Tennessee, eventually moving into the chief executive officer role in 2000. His many accomplishments with the company include enhancing the partnership between Delta Dental and its alma mater through engagement and charitable support.

Under his leadership at Delta Dental, the company has increased revenues nearly fourfold. As a result of its success, Dr. Wenk has ensured that the company maintains a focus on giving back to the communities it serves. Delta Dental has become the single largest dental insurance company and to a longtime Memphis periodontist who helped

Dr. Justin Towner

Dr. Towner was one of four dentists who initiated the formation of the UT Dental Alumni Association in the early 1960s and served as its president from 1965 to 1966. He was also instrumental in establishing an annual alumni meeting, which would evolve into the Mid-South Dental Congress, now known as the William F. Slagle Dental Meeting.

A lifelong Memphian, Dr. Towner attended Memphis City Schools, Washington and Lee University, and then graduated from the University of Tennessee College of Dentistry in 1954. Shortly thereafter, he served in the U.S. Air Force for two years. After returning to Memphis, he practiced periodontics for 44 years and taught in the Department of Periodontics at the UT College of Dentistry for 15 years.

As author and co-author, he published several articles on clinical periodontics and occlusion, and contributed continuing education courses and programs. His professional memberships include Memphis Dental Society, where he served as president and received its Humanitarian Award. He also served in the Tennessee Dental Association, American Dental Association, Southern Academy of Periodontology, and American Academy of Periodontology.

A member of Second Presbyterian Church, Dr. Towner has served as elder and clerk of the session. He has enjoyed teaching Sunday School and has served on numerous committees, most notably the World Missions committee, and made several trips to Haiti and Belize as a dental missionary.

For Dr. Towner, the most rewarding aspect of his career is the opportunity to teach students and young dentists the importance of including the treatment of periodontal disease into their practices. He says the most rewarding aspects of his life are his wife of 61 years, Ginny, his three children and their spouses, and his seven grandchildren.

When speaking of the award, Dr. Towner said, “I feel so honored and humbled to receive it. I know others who have received it, and I feel like I should carry their bags, rather than walk beside them. I owe where I am today to the College of Dentistry, and I hope I have given back to it.

“I learned the most from my students,” he continued. “Buck Penell, the Periodontics Department chair, both were good examples and teachers for me.”

“Both Dr. Towner and Dr. Wenk are true ambassadors for UTHSC and the College of Dentistry,” said Tim Lanier, assistant vice chancellor for Alumni Affairs. “Their impact on the college and the dental profession as a whole is hard to measure. We are fortunate to be able to call them our own.”

The mission of the William F. Slagle Dental Meeting is to advance the delivery of quality dental care by providing dental teams with a premier educational opportunity. In accordance with this mission, the Slagle Dental Meeting is committed to offering extensive continuing education courses, commercial exhibits, and additional educational programs that advance the growth and development of the dental profession.

The Slagle Dental Meeting is sponsored by the UT College of Dentistry Alumni Association. All profits from the Slagle Dental Meeting are used to support dental education programs at the University of Tennessee.

Look for more information in the coming weeks about the 2017 Slagle Dental Meeting being held March 3 – 5, 2017. Please see page 45 for photos and a summary of the 2016 meeting.
On the move

Two members of the UTHSC Alumni and Development transition to new positions

Tim Lanier, assistant vice chancellor for Alumni Affairs

After 19 successful years as director of Development for the College of Dentistry, Tim Lanier has been appointed assistant vice chancellor for Alumni Affairs at UTHSC. In his new position, Lanier manages the Office of Alumni Affairs, which coordinates alumni engagement efforts for all six colleges at UTHSC.

“I am excited to join a great team in the Office of Alumni Affairs,” says Lanier. “Our dental alumni have been so supportive of me over the years. In my new position, I am pleased to continue working with dentistry and also getting to know our alumni in the other colleges.”

Lanier came to UTHSC from the University of Tennessee at Martin, where he served as assistant director of Development from 1994 to 1997. He received a Bachelor of Arts in Communications from Lambuth University and a Master of Science in Communications from the University of Tennessee, Knoxville. He and his wife, Blair, have two daughters, Mallory and Grace.

Will Whiting, senior director of Development

College of Dentistry and Regional Programs

On June 1, Will Whiting, a member of the UTHSC Alumni and Development team, was named senior director of Development for the College of Dentistry. Prior to this appointment, Whiting served as director of Regional Development and worked with all six colleges at UTHSC. In his new role, Whiting will focus his time and efforts on expanding the fundraising program in the College of Dentistry, while also managing the regional fundraising team that works to support the other colleges and programs that are part of UTHSC’s four campuses.

“I’m thrilled to move into this new position and continue working with our incredible alumni and friends in the College of Dentistry,” says Whiting. “Tim Lanier did an outstanding job in the college prior to his promotion. I have big shoes to fill, but I’m looking forward to continuing to advance the mission of the College of Dentistry and the Health Science Center overall. This is an exciting time in the life of our institution, and it is an honor and privilege to get to work with all of our generous benefactors.”

Before joining UTHSC, Whiting worked for the University of Arkansas in the Division of University Advancement. At Arkansas, Whiting held positions in both Corporate and Foundation Relations and the Office of University Initiatives where he raised funds to support major campus priorities. Whiting has also held other positions in fundraising and governmental affairs with the Little Rock Regional Chamber of Commerce, Arkansas Children’s Hospital, and the President William J. Clinton Foundation.

Whiting holds undergraduate degrees in Communication and Journalism and a master’s degree in Organizational and Crisis Communication. He was appointed recently to serve on the Advisory Committee for the 2017 AAMC Group on Institutional Advancement’s national conference.

You are Invited to the

2016 Golden Graduate Homecoming

OCTOBER 19-21, 2016 MEMPHIS, TENNESSEE HONORING GRADUATES OF 1966 FROM ALL SIX UTHSC COLLEGES

Joe Greer, DDS ’73

Where would you be without UTHSC?

Where indeed! The only thing I know for certain is that without UTHSC, I would not be the dentist that I am today. I may have gone to another school, but I never would have met my former dental school roommate, nor befriended by the dean—two individuals who have had a profound impact on my life.

What is your advice to other alumni about getting involved?

I think we all know that UTHSC and the College of Dentistry can put all the financial gifts we can give to good use. So, I encourage all alumni to give and give often. I am also passionate about giving of one’s time, so in addition, I encourage all alumni to offer their time to the College of Dentistry by serving as mentors, sponsors, or volunteer faculty.

What are your notable memories from your time spent at UTHSC?

One of two of my most notable memories from UTHSC is meeting my former dental school roommate, Dr. Charles Burton, Jr., the guy who had the most positive influence on my adult life. UTHSC put us together, we are still the best of friends, and he still treats me like his little brother. A second most notable memory was when I was going to be late in submitting a finished denture case. It was a Sunday evening, and the school was closed. The case was due Monday morning, and I needed to pack and cure my denture overnight, but the only person I knew who had a key was Dean Wells. I contacted him, and he agreed to open the lab so I could finish the project. He stayed in the lab while I set, waxed, packed and invested the denture. It cured overnight, and I finished it the following morning. Although Dean Wells had no direct input, my case became known, jokingly, to a few as the denture the dean cured!
DeWayne B. McCamish, DDS ’70, MS ’73

elected president of
The American Association of Orthodontists

DeWayne B. McCamish, DDS, MS, an orthodontist with offices in Chattanooga, Signal Mountain, and Ooltewah, Tennessee, has been elected the 2016-17 president of the American Association of Orthodontists (AAO), the world’s oldest and largest dental specialty organization with more than 18,000 members. The election was held during the AAO’s 116th Annual Session in Orlando, Florida.

It is both a privilege and an honor to serve orthodontic patients and the orthodontists who provide their treatment the world over through the AAO,” said Dr. McCamish. “Each year the AAO helps members deliver the best possible care to their patients by providing them and their staff with educational opportunities, ongoing research, advocacy work and professional services. As the AAO continues to serve an increasingly diverse range of members and patients, I am humbly honored to represent and to be part of an organization that has a lifelong positive impact on the health and well-being of children, teenagers and adults. Orthodontists throughout the world affect the lives of those we treat by giving smiles that change lives.”

In 2009, the Southern Association of Orthodontists (SAO) elected Dr. McCamish to be its representative on the AAO Board of Trustees. The SAO is one of eight constituent organizations of the AAO and serves orthodontists practicing in Alabama, Florida, Georgia, Kentucky, the portion of Louisiana that lies east of the Mississippi River, Mississippi, North Carolina, South Carolina, Tennessee, Virginia and West Virginia.

Dr. McCamish earned his doctor of Dental Surgery degree from the UTHSC College of Dentistry in 1970 and a master’s degree in orthodontics in 1973 from its Graduate School of Orthodontics. While a dental student, he was awarded the Faculty Medal, the Oral Medicine Award, the Oral Roentgenography Award, the Psi Omega Scholastic Achievement Award, membership of the Dean’s Society and membership in Omicron Kappa Upsilon. Dr. McCamish served both as class president and president of his Dean’s Society and membership in Omicron Kappa Upsilon. Dr. McCamish earned his doctor of Dental Surgery degree from

Alumni

2016 Slagle Dental Meeting a success

Numerous continuing education credits were awarded to participants and several notable speakers were all a part of making the 2016 William F. Slagle Dental Meeting, held at the Hilton in Memphis, a huge success.

At the luncheon on March 5, the 2016 Outstanding Alumni Awards were presented to Justin Towne, DDS ’43, of Memphis and Phil Work, DDS ’77, of Brentwood, Tennessee. The Welcome Reception, sponsored by Henry Schein, was held at the Big Cypress Lodge located within the new Bass Pro Shops in downtown Memphis. The reception, with double the traditional attendance, provided time for alumni, friends, and staff members to network, enjoy delicious food and beverages, and explore the new, fascinating Bass Pro facility.

The many exhibitors, exciting networking events and, of course, many generous sponsors all contributed to the success of the event. This annual conference, presented by the UTHSC College of Dentistry and the University of Tennessee Alumni Association would not be possible without Delta Dental of Tennessee, Delta Dental of Arkansas, Nashville Dental, Patterson Dental, Occee Oral Surgery, the Tennessee Dental Association, WaterPik, Kuraray, and Henry Schein, all of which provided financial support to the 2016 meeting.

2017 meeting in the works

The meeting’s program chairman, Dr. Jay Ragan, reports that planning for the 2017 event has already begun. Popular hands-on courses, as well as presentations on restorative dentistry, oral surgery, nutrition, oral pathology, removable prosthetics, sleep apnea, and practice management will be offered. Nationally renowned speakers, Drs. Harold and Gavin Heyman, the Madoff Brothers, Dr. Joseph Massad, Dr. David Ronner, Dr. Kyle Ash, and several others have signed on for the event.

The 2017 meeting will also include a new element – specific programs for recent graduates. Scheduled in conjunction with the annual Alumni Weekend, and comprising continuing education offerings, alumni reunions, and networking events, the 2017 William F. Slagle Dental Meeting will be held March 3 – 5, 2017. Make arrangements now to join fellow alumni in Memphis for this important, enriching event!
Legacies in practice

From left – Dr. John Talley, Dr. David Young and Dr. Stan Young at the 2016 College of Dentistry graduation.

David Young, DDS ‘16, is now the third generation from his family to attend the UTHSC College of Dentistry and to work in the family-owned dental practice located in Dyersburg, Tennessee. He was proceeded by his grandfather John Talley, DDS ’15, and father Stanley Young, DDS ’84.

“We are excited to have David join the practice and continue the family tradition of dentistry,” said Dr. Stanley Young. “We have a love for people and community. Over the years, we have served generations of families. I know that David will take good care of the patients, and will always do right by them.”

With a true passion for helping people, 26-year-old David has invested time helping his father to treat patients at Reelfoot Rural Ministry, as well as serving time on mission trips to Honduras, where he provided dental services for the underprivileged.

“I was drawn to dentistry after seeing my father’s and grandfather’s dedication to their patients, and the wonderful relationships that they established,” said David. Established in 1955, the family-owned practice, started by David’s grandfather, has thrived in the Dyer County community by providing compassionate care to its patients.

Dr. Talley was born and raised in Hills, Tennessee. During his younger years, Dr. Talley, now 92, enlisted to serve in the Navy during World War II. Afterwards he attended dental school at UT. “I liked working with my hands and the decision to open my own practice was a great choice. I loved it, and now I miss it,” laughed Talley. “I grew up in Hills, so I decided to open my business in Dyer County. Back then, Dyersburg seemed like a pretty big city to someone raised in Hills.”

In June of 1984, Stan Young, sharing his father-in-law’s passion for people as well as dentistry, joined the family practice. Stan continues the legacy of service established by Dr. Talley and is active in the community. Currently, he is a member of the UT College of Dentistry Alumni Board and the UT Board of Governors. In 1992, Dr. Talley retired and turned the practice over to Stan. He expressed great joy in knowing that his life’s work will now be carried on by both his son-in-law and grandson.
